

### 3 Control Recipes and Control Recipe Destinations

Control recipes are used to transfer the control data defined in the process order by the user to the process control. The control data like process instructions assigned to the phase are transferred to their respective destinations assigned in the phase.

**Control Recipe Destinations:** SAP standard has Four types of recipe destinations defined

1. Transfer to ABAP list-based PI sheet
2. Download to ext. system, initiated by SAP process management
3. Download to ext. system, initiated by ext. process control
4. Transfer to browser-based PI sheet

**Path:** SPRO→Production planning for Process Industries→Process management→Decentralized Process Management →Define and Set Up Control Recipe Destinations

Here in the work area enter the plant and select enter. Now double click the HTML-PI sheet (05) to open it. Here it has the destination type 4 which will enable to create browser based PI sheets. In the destinations, we can assign digital signatures for the process steps. Here we can have levels of approvals defined for the process step.

### 4 Process Message Characteristics

There are standard process message characteristics available in SAP which can be transported to the local client.

All standard characteristics for process messages starts with 'PPPF' and cannot be changed. If we require additional characteristics then user can create them as per the business requirement.

**Path:** SPRO→Production planning for Process Industries→Process management→ Process Messages→Define Characteristics for Process Messages

**Process Messages and Destinations:** Process Messages are used to transfer the process data from process control to the defined destinations. Process messages trigger various business functions such as GI, GR, mail trigger, data transfer to external system etc. The actual data entered in the system are transferred to the respective work areas defined in the destinations. The process message categories contains the process instruction characteristics, message destinations and the characteristics which the destination needs to update. Standard SAP contains several Process messages which can be transported to the local client; in addition we can create new messages with destinations as per the business need.
