Practical Guide To Haccp:

HACCP Sara Mortimore,2012-12-06 As a long standing protagonist of good manufacturing practice in the food and drink industry I was more than pleased to be invited to edit a series of books on practical approaches to food control The series does not set out to re invent the wheel but rather to draw together collective wisdom in respect of particular food control issues and to present them in a way which will allow relevant managers management or practitioners to address them on a practical level It also tries to give a practical perspective for those concerned with law enforcement some of whom will be newly challenged in face of EEC food control legislation I am particularly delighted that the first in the series should be on the subject of hazard analysis and that the authors have real experience of HACCP applications within major and highly respected organizations Sainsbury s and Grand Metropolitan are to be commended for the support that they have given to this initiative as are others who have endorsed contributions from their employees I have also been impressed with the quality and scope of the input from the authors of this publication Sara Mortimore and Carol Wallace and hope that the example of practical application which runs as an ongoing theme throughout the book will help those applying HACCP for the first time to weave through the inevitable difficulties without undue shedding of blood sweat and tears A Practical Guide

Abdul Hannan, Kazi Ahsan Habib, A. M. Shahabuddin, Md. Ariful Haque, Mohammad Bodrul Munir, 2022-05-30 The book is a practical guide for the various steps in the post harvest technology of frozen shrimps Shrimps are one of the most common and popular types of seafood consumed globally The book discusses some of the most sought after shrimps such as *Penaeus monodon* *P. vannamei* and *Macrobrachium rosenbergii* Good quality shrimp is a prerequisite for the seafood business as it is used for human consumption Lack of proper knowledge in raw materials handling and post harvest processing is the main obstacle in quality shrimp production Complex business policy commitment break in both parties buyers and sellers competition with other seafood producing countries and fluctuation of currency in international seafood market are the factors affecting international seafood business This book closes this gap in literature and facilitates the production of excellent quality exportable frozen shrimp through informed practices from experts The book includes information about packaging of frozen shrimp inspection and shipment It also compiles different mathematical calculations which are in practiced in the processing industries The book is essential reading for professionals in the shrimp producing and processing industries It is also useful for researchers in fisheries science aquaculture food technology and food microbiology

Principles and Applications of Modified Atmosphere Packaging of Foods B. Blakistone, 2013-12-14 Modified atmosphere packaging may be defined as an active packaging method in which an altered atmosphere is created in the headspace that retards chemical deterioration while simultaneously retarding growth of spoilage organisms Shelf lives of perishable products such as dairy products meat poultry fish fruits and vegetables and bakery items are limited by biochemical changes in the product catalysed by exposure to the normal atmosphere 21 % oxygen 78% nitrogen and less than 0.1 % carbon dioxide and growth of spoilage organisms Modification of

the atmosphere within a package containing these products helps to better maintain the quality of the food under longer storage conditions and retards the growth of undesirable organisms. Of course deterioration is also slowed by chilling which is required for the transport to market of highly perishable items like meat, poultry and fish that would either spoil or have the potential for contamination by certain food pathogens. Chilling plus a modification of the atmosphere optimizes the keeping quality of food. Modification of the atmosphere has been known for over a century as a means of food preservation and has become a very popular means of food preservation in the latter part of the 20th century. Modified atmosphere packaging (MAP) is practised extensively in Europe, Canada and the US. Both vacuum packaging (removal of air from the package) and addition of gases within the package are considered MAP.
