A new edition of this title is available ISBN 10 0137142951 ISBN 13 9780137142958. Since I'm in an educational environment I found the content of Sobell's book to be right on target and very helpful for anyone managing Linux in the enterprise. His style of writing is very clear. He builds up to the chapter exercises which I find to be relevant to real world scenarios a user or admin would encounter. An IT/IS student would find this book a valuable complement to their education. The vast amount of information is extremely well balanced and Sobell manages to present the content without complicated asides and meandering prose. This is a must have for anyone managing Linux systems in a networked environment or anyone running a Linux server. I would also highly recommend it to an experienced computer user who is moving to the Linux platform. Mary Norbury IT Director, Barbara Davis Center, University of Colorado at Denver. From a review posted on slashdot.org: I had the chance to use your UNIX books when I was in college years ago at Cal Poly San Luis Obispo, CA. I have to say that your books are among the best. They're quality books that teach the theoretical aspects and applications of the operating system. Benton Chan, IS Engineer. The book has more than lived up to my expectations from the many reviews I read. Even though it targets FC2 I have found something very rare with your book. It doesn't read like the standard technical text; it reads more like a story. It's a pleasure to read and hard to put down. Did I say that? David Hopkins, Business Process Architect. Thanks for your work and for the book you wrote. There are really few books that can help people to become more efficient administrators of different workstations. We hope in Russia that you will continue bringing us a new level of understanding of Linux/UNIX systems. Anton Petukhov. Mark Sobell has written a book as approachable as it is authoritative. Jeffrey Bianchine, Advocate Author, Journalist. Excellent reference book, well suited for the sysadmin of a Linux cluster or the owner of a PC contemplating installing a recent stable Linux. Don't be put off by the daunting heft of the book. Sobell has striven to be as inclusive as possible in trying to anticipate your system administration needs. Wes Boudville, Inventor.
