Limit Cinema Chelsea Birks, 2021-07-15 WINNER of the Society for Cinema and Media Studies SCMS Best First Book Award 2023 Limit Cinema explores how contemporary global cinema represents the relationship between humans and nature During the 21st century this relationship has become increasingly fraught due to proliferating social and environmental crises recent films from Lars von Trier's *Melancholia* 2011 to Apichatpong Weerasethakul's *Uncle Boonmee Who Can Recall His Past Lives* 2010 address these problems by reflecting or renegotiating the terms of our engagement with the natural world In this spirit this book proposes a new film philosophy for the Anthropocene It argues that certain contemporary films attempt to transgress the limits of human experience and that such limit cinema has the potential to help us rethink our relationship with nature Posing a new and timely alternative to the process philosophies that have become orthodox in the fields of film philosophy and ecocriticism Limit Cinema revitalizes the philosophy of Georges Bataille and puts forward a new reading of his notion of transgression in the context of our current environmental crisis To that end Limit Cinema brings Bataille into conversation with more recent discussions in the humanities that seek less anthropocentric modes of thought including posthumanism

speculative realism and other theories associated with the nonhuman turn The problems at stake are global in scale and the book therefore engages with cinema from a range of national and cultural contexts From Ben Wheatley s psychological thrillers to Nettie Wild s eco documentaries limit cinema pushes against the boundaries of thought and encourages an ethical engagement with perspectives beyond the human

Managing Planet Earth ,1989 *The Sleepwalkers* Arthur Koestler,2017-02-23 Arthur Koestler s extraordinary history of humanity s changing vision of the universe In this masterly synthesis Arthur Koestler cuts through the sterile distinction between sciences and humanities to bring to life the whole history of cosmology from the Babylonians to Newton He shows how the tragic split between science and religion arose and how in particular the modern world view replaced the medieval world view in the scientific revolution of the seventeenth century He also provides vivid and judicious pen portraits of a string of great scientists and makes clear the role that political bias and unconscious prejudice played in their creativity

Hadean Earth T. Mark Harrison,2020-06-18 This book consolidates the latest research on the Hadean Eon the first 500 million years of Earth history which has permitted hypotheses of early Earth evolution to be tested including geophysical models that include the possibility of plate tectonic like behavior These new observations challenge the longstanding Hadean paradigm based on no observational evidence of a desiccated lifeless continent free wasteland in which surface petrogenesis was largely due to extraterrestrial impacts The eon was termed Hadean to reflect such a hellish environment That view began to be challenged in 2001 as results of geochemical analyses of greater than 4 billion year old zircons from Australia emerged These data were consistent with the zircons forming in a world much more similar to today than long thought and interpreted to indicate that sediment cycling was occurring in the presence of liquid water This new view leaves open the possibility that life could have emerged shortly after Earth accretion The epistemic

limitations under which the old paradigm persisted are closely examined The book is principally designed as a monograph but has the potential to be used as a text for advanced graduate courses on early Earth evolution
