Abstract— Smart home technology is emerging rapidly as an exciting new paradigm. A wide range of aspects that includes security, energy saving, ventilation, smart kitchen is covered in this paper. All of the above is executed with the help of smart devices such as remote control, security alarms, sensors etc. In this paper we present the above mentioned technologies and tools that can be integrated in smart home systems which can provide security energy saving and other such smart systems.

Keywords— Smart home technology, Security alarm, Sensors, Remote Control, Energy Management, Smart Network

I. INTRODUCTION

Smart home is the integration of technology and services through home networking for a better quality of living. It uses different technologies to equip home parts for more intelligent monitoring and remote control and enabling them for influential harmonic interaction among them such that the everyday house works and activities are automated without user intervention or with the remote control of the user in an easier, more convenient, more efficient, safer, and less expensive way. In some cases, Integrating the home services as shown in fig. 1 [1] allows them to communicate with one another through the home controller, thereby enabling single button to control the various home systems according to preprogrammed scenarios or operating modes [2].

Smart homes have the potential to improve home comfort, convenience, security and energy management. Moreover it can be used for elder people and those with disabilities, providing safe and secure environments.

Fig.1 A Smart home Integration services

Section I is a brief definition of smart home and its benefits. Section II focuses on the Smart home technology. Section-III describes a case study of how smart home can reduce the energy consumption via managing intelligently the devices by controlling the lighting, air conditioning (HVAC) and other home appliances. In section IV, Conclusion and in Section V, References have been provided.

II. SMART HOME TECHNOLOGY

A. Smart home network

Smart home network technology can be classified into two main types, which are wiring system and wireless systems. [3]In wiring system-here are many types of wires that people may want to install in-wall. Many home-automations are connected through wiring system such as new wire (twisted pair, optical fiber), Powerline, Busline, etc. An example of outstanding technology is X10, which is open standard for home automation. X10 transmits binary data using the Amplitude Modulation (AM) technique. And X10-controllers send signals over existing AC wiring to receiver modules.

In the wireless system, there must have two main elements that are sender and receiver. Many new appliances use wireless technology to communicate with other devices. The example of wireless communication system are microwaves, Infrared (IR), radio frequency (RF), Wi-Fi, Bluetooth, IEEE 802.11, and so on. Furthermore, some of smart home network standard can work using both wiring system and wireless system. An example of wireless communication system for smart home is Z-wave, which is a reliable and affordable wireless home automation solution.
