Hacia finales del siglo XIX el incremento del conocimiento científico permitió la transformación de la industria artesanal en una industria basada en el conocimiento científico. Fenómeno que todavía se persigue en la actualidad. Fue en ese momento cuando se puede considerar que nacieron las Industrias Agrarias. Las Industrias Agrarias emplean fundamentalmente materias primas de origen vegetal o animal cuyas características las hacen fácilmente alterables o degradables. Se trata de materias vivas antes o incluso a veces durante el procesamiento cuyos componentes orgánicos constituyen un medio de vida adecuado para el desarrollo microbiano y un sustrato apto para la acción enzimática y el desequilibrio de componentes constitutivos con posibilidad de modificación sensorial y nutricional. Por otra parte presentan siempre una considerable dispersión en sus propiedades y características tanto en el tiempo como en el espacio lo cual es un grave inconveniente a la hora de elaborar productos que deban responder a una adecuada homogeneidad y ser estables durante el almacenamiento. La obra ha sido dividida en secciones dedicadas a los principales tipos de industrias. En cada uno de los capítulos que componen estas secciones he abordado el estudio y conocimiento de las materias primas y de los productos elaborados, la ingeniería de diseño y de los procesos elegidos así como la implantación del sistema APPCC en cada una de las industrias seleccionadas.
