Analyses of Behavioural and Neuroimaging Data in Perception and Decision-Making Paul Sajda,Guillaume A.

Rousselet,Cyril R. Pernet,2012 The cognitive psychology of perception and decision making is at a cross road Most studies still employ categorical designs a priori classified stimuli and perform statistical evaluations across subjects However a shift has been observed in recent years towards parametric designs in which the information content of stimuli is systematically manipulated to study the single trial dynamics of behaviour reaction times eye movements and brain activity EEG MEG fMRI By using the information contained in the variance of individual trials the single trial approach goes beyond the activity of the average brain it reveals the specificity of information processing in individual subjects across tasks and stimulus space revealing both inter individual commonalties and differences This Research Topic provides theoretical and empirical support for the study of single trial data Topics of particular interest include 1 description of the richness of information in single trials and how it can be successfully extracted 2 statistical issues related to measures of central tendency control for multiple comparisons multivariate approaches hierarchical modelling and characterization of individual differences 3 how manipulation of the stimulus space can allow for a direct mapping of stimulus properties onto brain activity to infer dynamics of information processing and information content of brain states 4 how results from different brain imaging techniques can be integrated at the single trial level *SAGE Handbook of Research on Classroom Assessment* James H. Performance Assessment of Control Loops Biao Huang, Sirish L. Shah, 2012-12-06 The series *Advances in Industrial Control* aims to report and encourage technology transfer in control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination Benchmarking is a technique first applied by Rank Xerox in the late 1970s for business processes As a subject in the commercial arena benchmarking thrives with for example a European Benchmarking Forum It has taken rather longer for benchmarking to make the transfer to the technical domain and even now the subject is making a slow headway A key research step in this direction was taken by Harris 1989 who used minimum variance control as a benchmark for controller loop assessment This contribution opened up the area and a significant specialist literature has now developed Significant support for the methodology was given by Honeywell who have controller assessment routines in their process control applications software therefore it is timely to welcome a first monograph on controller performance assessment by Biao Huang and Sirish Shah to the *Advances in Industrial Control* series
