Foundation Website Creation with CSS, XHTML, and JavaScript Steve Smith, Jonathan Lane, 2008-09-02 Foundation Website Creation with CSS XHTML and JavaScript covers the entire process of building a website. This process involves much more than just technical knowledge and this book provides you with all the information you'll need to understand the concepts behind designing and developing for the Web as well as the best means to deliver professional best practice based results. There is far more to building a successful website than knowing a little Hypertext Markup Language (HTML). The process starts long before any coding takes place and this book introduces you to the agile development process explaining why this method makes so much sense for web projects and how best to implement it. Planning is vital so you'll also learn how to use techniques such as brainstorming wireframes mockups and prototypes to get your project off to the best possible start and help ensure smooth progress as it develops. An understanding of correct semantic markup is essential to any web professional so this book explains how XHTML should be used to structure content so that the markup adheres to current web standards. You'll learn about the wide range of HTML elements available to you and you'll learn how and when to use them through building example web pages. Without creative use of Cascading Style Sheets (CSS) websites would all look largely the same. CSS gives you the ability to set your website apart from the rest while maintaining the integrity of your markup. You'll learn how CSS works and how to apply styles to your pages enabling you to realize your design ideas in the browser. JavaScript can be used to make your website easier and more interesting to use. This book provides information on appropriate uses of this technology and introduces the concepts of programming using it. You'll also see how JavaScript works as part of the much hyped technique Ajax and in turn where Ajax fits into the wider Web 2.0 picture. While a website is being built it needs to be tested across multiple browsers and platforms to ensure that the site works for all users regardless of ability or disability and the book explains how best to do these tasks. Then it discusses the process of launching and maintaining the site so that it will continue to work for all its users throughout its life cycle. The book concludes by covering server side technologies acting as a guide to the different options available and explaining differences between available products. With insights from renowned experts such as Jason Fried of 37signals, Daniel Burka of Digg and Pownce and Chris Messina of Citizen Agency, this book provides invaluable information applicable to every web project regardless of size, scope or budget.

Designing with Web Standards Jeffrey Zeldman, 2003 Written by the authority on web standards, Jeffrey Zeldman, founding member of the WaSP web standards project, provides code snippets and web site examples of compliant code in use so that when done correctly, all web sites will look the same regardless of the browser. Details compatibility in terms of HTML, XHTML, XML and CSS, the key coding languages of the web.
