speakers followed by presentations on specific aspects of the general topic of the session Experimental studies are given priority over clinical studies of patient populations The proceedings comprise both keynote speakers texts and selected free communications Posters were considered for publication in the proceedings and the volume includes exhibited materials on the work of prominent spermatologists highlighting their important past achievements in the field A Handbook of Intrauterine Insemination Godwin I. Meniru, Peter R. Brinsden, Ian L. Craft, 1997-07-31 Approximately 15% of couples experience difficulty in conceiving and a proportion of them may require assisted conception treatment to alleviate continuing infertility Intrauterine insemination is an effective first line treatment in properly selected cases and is less invasive than in vitro fertilisation and its variants This multi authored text is a comprehensive account of how to set up and run a successful intrauterine insemination program It provides a very practical account and explains clearly the scientific and medical issues The various chapters deal with design and equipment of the unit patient selection counselling ovarian stimulation strategies the role of ultrasonography semen analysis and sperm preparation intrauterine insemination techniques semen cryopreservation and banking and complications The contributing authors are all experienced practitioners and researchers in reproductive medicine and have created a manual that will be useful to full range of professionals involved in the provision of care for infertile couples such as clinicians andrologists embryologists other scientists nurses counsellors psychotherapists and managerial staff Because of its clear presentation students and patients will also find the volume informative **Practical Guide to Sperm Analysis** Nicolás Garrido, Rocío Rivera, 2017-05-25 This is a reference manual for daily use in the Reproductive Medicine or Andrology laboratory which goes beyond the literature available in the scientific journals by compiling insights into a detailed and applied clinical approach All established practitioners in Reproductive Medicine will find much of practical relevance about the latest insights into sperm selection and analysis Encyclopedia Of Reproductive Technologies Annette Burfoot, 2019-08-19 This collection of encyclopedic entries provides a broad based appreciation of new reproductive technologies that includes accessible technological descriptions and their historical and social contexts The collection is divided into five thematic areas Theories of Reproduction Ancient to Contemporary Early Reproductive Technologies Post War De *IUI: Intrauterine Insemination* Gita Ganguly Mukherjee, 2012-12-15 Today intrauterine insemination IUI is one of the primary procedures performed while treating less severe causes of infertility like ovulatory dysfunction cervical hostility early endometriosis mild male factor problems and even in those with unknown etiology In spite of this widespread popularity there is considerable variation in ultimate result reported This inconsistency could be attributed to lack in uniformity in patient selection clinical execution and technology used Divided into seven sections covering topics related to general andrology ovulation special situations var *Manual on Assisted Reproduction* T. Rabe, K. Dietrich, Thomas Strowitzki, 2012-12-06 Our knowledge of reproductive medicine has expanded rapidly since the birth of Louise Brown the first baby to be conceived by in vitro fertilization which

was performed by Professors Patrick Steptoe and Bob Edwards in Oldham England in 1978. Hardly a year goes by without the development of a new or a modification of an existing method of assisted reproduction. Within a relatively short period in vitro fertilization has been introduced into the treatment of female infertility. Intracytoplasmic sperm injection has also created new opportunities for the treatment of male infertility. The first edition of this book was published in 1996. In the second edition most of the chapters have been updated and additional interest is focused on intracytoplasmic sperm injection (ICSI) in view of the risk of malformations in newborns. This manual addresses the techniques of assisted reproduction that are available today. Competent authors from various centers present in a concise way their tried and tested procedures so that the latter can be readily implemented. Due to different legal regulations the scope of assisted reproduction is much more limited in Germany than in many other countries. For example, whereas only three embryos may be created and transferred in Germany, such restrictions do not exist in several other European countries and the United States. Furthermore, heterologous fertilization, oocyte donation, and surrogate motherhood are banned in Germany.

IBERAMIA is the international conference series of the Ibero American Artificial Intelligence community that has been meeting every two years since the 1988 meeting in Barcelona. The conference is supported by the main Ibero American societies of AI and provides researchers from Portugal, Spain, and Latin America the opportunity to meet with AI researchers from all over the world. Since 1998 IBERAMIA has been a widely recognized international conference with its papers written and presented in English and its proceedings published by Springer in the LNAI series. This volume contains the papers accepted for presentation at Iberamia 2008 held in Lisbon, Portugal, in October 2008. For this conference 147 papers were submitted for the main track and 46 papers were accepted. Each submitted paper was reviewed by three members of the Program Committee. PC coordinated by an Area Chair. In certain cases extra reviewers were recruited to write additional reviews. The list of Area Chairs, PC members, and reviewers can be found on the pages that follow. The authors of the submitted papers represent 14 countries with topics covering the whole spectrum of themes in AI: robotics and multiagent systems, knowledge representation and constraints, machine learning and planning, natural language processing, and AI applications. The program for Iberamia 2008 also included three invited speakers: Christian Lemaitre (LANIA Mexico), R. Michael Young (NCSU, USA), and Miguel Dias (Microsoft, LDMC Lisbon), as well as several workshops.
