Practical Geometry (Part One) Alexander H. Ko, Kwang-Seuk Ko, 2015-12-01 Each chapter contains a study guide that goes in depth into each subject before the practice problems. For each concept, there are step-by-step explanations on how to approach solving problems. There are a variety of practice problems on which covers everything that had been gone over in the study guide. Afterwards, there is a self-test that assesses that knowledge of the student. And in the middle of the book, there is another review test that grasps the reader's knowledge of all the previous chapters.

Table of contents:

- Chapter 1 Basic Geometry: The basic elements of geometry are introduced where the student analyzes different kinds of angles and learns many fundamental terms about geometry.
- Chapter 2 Inductive and Deductive Reasoning: This chapter introduces the conditional statement and its various forms and shows various properties of equality to solve algebraic equations.
- Chapter 3 Perpendicular and Parallel Lines: The properties of perpendicular and parallel lines are given with distinctive pairs of angle relationships.
- Chapter 4 Congruent Triangles: Triangles are classified by their sides and angles; congruent figures and their corresponding parts are identified, and triangles are proven to be congruent through different postulates and theorems.
- Chapter 5 Triangles: This chapter discusses the properties of perpendicular and angle bisectors, the properties of medians and altitudes of triangles, and the properties of midsegments of triangles.
- Chapter 6 Quadrilaterals: This chapter describes polygons based on limited information, classifies the different kinds of quadrilaterals, and shows the different properties of quadrilaterals, which includes but is not limited to parallelograms, squares, and trapezoids.

Review Test: Additionally, the appendix contains useful formulas as well as relevant vocabulary.
