The Sacred Network Chris H. Hardy, 2011-02-23 How sacred sites amplify the energies of consciousness the earth and the universe Examines the web of geometrical patterns linking sacred sites worldwide with special focus on the sacred network of ley lines in Paris Unveils the coming state of shared consciousness for humanity fueled by the sacred network Reveals how consciousness is a tangible form of energy First marked by the standing stones of our megalithic ancestors the world s sacred sites are not only places of spiritual energy but also hubs of cosmic energy and earthly energy Generation upon generation has recognized the power of these sites with the result that each dominant culture builds their religious structures on the same spots the Cathedral of Notre Dame in Paris for example was constructed over a Temple to Diana that in turn had been built over a stone pillar worshipped by the Gauls In The Sacred Network Chris Hardy shows how the world s sacred sites coincide with the intersections of energetic waves from the earth s geomagnetic field and how via their megaliths temples and steeples these sites act as antennae for the energies of the cosmos Delving deeply in to Paris s sacred network she also explores the intricate geometrical patterns created by the alignments of churches and monuments such as pentagrams and Stars of David Revealing that consciousness is a tangible

energy she explains how the sacred network is fueling an 8 000 year evolutionary cycle initiated by our megalithic ancestors that will soon culminate in a new state of shared consciousness for humanity

Handbook of the History and Philosophy of Mathematical Practice Bharath Sriraman, 2024-04-26

The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present. It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed. Each section offers insights into the origins, debates, methodologies, and newer perspectives that characterize the discipline today. Contributions are written by scholars from mathematics, history, and philosophy, as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today, who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy.

This book, with its exciting depth and breadth, illuminates us about the history, practice, and the very language of our subject about the role of abstraction, of proof, and manners of proof about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought. The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover, from deep Platonic and Neoplatonic influences to the most current experimental approaches. Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition, this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis, Reuben Hersch, and Yuri Manin.

Barry Mazur, Gerhard Gade, University Professor, Harvard University

This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics. Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck, fields, geometry, algebra, number theory, logic, probability, analysis, viewpoints from Platonism to Intuitionism, or methods, proof, experiment, computer assistance, the reader will find a multitude of chapters that inform and fascinate.

Dedicating a volume to the memory of three mathematicians: Chandler Davis, Reuben Hersch, and Yuri Manin, who went out of their way to show to a broader audience that mathematics is more than

what they might think is an excellent initiative Gathering authors coming from many different backgrounds but who are very strict about the essays they write was successfully achieved by the editor in chief The result a great source of potential inspiration Jean Pierre Bourguignon Nicolaas Kuiper Honorary Professor at the Institut des Hautes tudes Scientifiques
