Smart Pulse Manual:

Prentice Hall Science Explorer Probeware Lab Manual 2005c Michael J. Padilla, Ioannis Miaoulis, Martha Cyr, Prentice-Hall Staff, 2004-09-15 Science Explorer Life Earth and Physical Science is a comprehensive series that provides a balanced focus of Life Earth and Physical Science topics in each book Manual of Geospatial Science and Technology John D. Bossler, James B. Campbell, Robert B. McMaster, Chris Rizos, 2010-03-05 Following in the tradition of its popular predecessor the Manual of Geospatial Science and Technology Second Edition continues to be the authoritative volume that covers all aspects of the field both basic and applied and includes a focus on initiating planning and managing GIS projects This comprehensive resource which contains contributions *Autocar*, 2002 **Federal Register**, 2013-07 *An Integrated Approach to Home Security and Safety Systems* Sonali Goyal, Neera Batra, N. K. Batra, 2021-10-15 This book provides an integrated solution for security and safety in the home covering both assistance in health monitoring and safety from strangers intruders who want to enter the home with harmful intentions It defines a system whereby recognition of a person stranger at the door is done using three modules Face Recognition Voice Recognition and Similarity Index These three modules are taken together to provide a percentage likelihood that the individual is in the known or unknown category The system can also continuously monitor the health parameters of a vulnerable person living alone at home and aid them in calling for help in an emergency The authors have analyzed a number of existing biometric techniques to provide security for an individual living alone at home These biometric techniques have been tested using MATLAB image processing and signal processing toolboxes and results have been calculated on the basis of recognition rate A major contribution in providing security is a hybrid algorithm proposed by the author named PICA which combines features of both PCA Principle Component Analysis and ICA Independent Component Analysis algorithms This hybrid approach gives better performance recognition than either system alone The second proposed hybrid algorithm for voice recognition is named as a MFRASTA algorithm by combining features of MFCC Mel Frequency Cepstral Coefficient and RASTA PLP Relative SpecTra Perceptual Linear Prediction algorithm After performing experiments results are collected on the basis of recognition rate The authors have also proposed a third technique named as a Similarity Index to provide trust based security for an individual This technique is text independent in which a person is recognized by pronunciation frequency tone pitch etc irrespective of the content spoken by the person By combining these three techniques a high recognition rate is provided to the person at the door and high security to the individual living independently at home In the final contribution the authors have proposed a fingertip based application for health monitoring by using the concept of sensors This application is developed using iPhone 6 s camera When a person puts their fingertip on a camera lens with the help of brightness of the skin the person s heartbeat will be monitored This is possible even with a low quality camera In case of any emergency text messages will be sent to the family members of the individual living alone by using 3G Dongle and MATLAB tool Results show that the proposed work

outperforms all the existing techniques used in face recognition voice recognition and health monitoring alone **Taiwan**

Biomimetic Robotic Artificial Muscles Kwang Jin Kim,Hyouk Ryeol Choi,Xiaobo Tan,David Pugal,2013-03-26 Biomimetic Robotic Artificial Muscles presents a comprehensive up to date overview of several types of electroactive materials with a view of using them as biomimetic artificial muscles The purpose of the book is to provide a focused in depth yet self contained treatment of recent advances made in several promising EAP materials In particular ionic polymer metal composites conjugated polymers and dielectric elastomers are considered Manufacturing physical characterization modeling

and control of the materials are presented. Namely, the book adopts a systems perspective to integrate recent developments in material processing, actuator design, control-oriented modeling, and device and robotic applications. While the main focus is on the new developments in these subjects, an effort has been made throughout the book to provide the reader with general basic information about the materials before going into more advanced topics. As a result, the book is very much self-contained and expected to be accessible for a reader who does not have background in EAPs. Based on the good fundamental knowledge and the versatility of the materials, several promising biomimetic and robotic applications, such as robotic fish propelled by an IPMC tail, an IPMC energy harvester, an IPMC-based valveless pump, a conjugated polymer petal-driven micropump, and a synthetic elastomer actuator-enabled robotic finger, are demonstrated.
