 Handbook of Generation IV Nuclear Reactors Second Edition is a fully revised and updated comprehensive resource on the
 latest research and advances in generation IV nuclear reactor concepts Editor Igor Pioro and his team of expert contributors
 have updated every chapter to reflect advances in the field since the first edition published in 2016 The book teaches the
 reader about available technologies future prospects and the feasibility of each concept presented equipping them users with
 a strong skillset which they can apply to their own work and research Provides a fully updated revised and comprehensive
 handbook dedicated entirely to generation IV nuclear reactors Includes new trends and developments since the first
 publication as well as brand new case studies and appendices Covers the latest research developments and design
 information surrounding generation IV nuclear reactors **Heat Pumps for Energy Efficiency and Environmental**
Progress J. Bosma,2012-12-02 The 70 papers collected in this volume present an up to date review of the trends in heat
 pump technology The heat pump is reviewed both as being part of a more comprehensive system and as a refined device
 providing energy and greenhouse gas emission reductions Its implementation in a system or process must be carefully
 considered at an early stage of design or development and process integration is discussed in detail as a valuable tool for
 industry The heat pump is proving to be a highly effective energy conserving tool particularly when designed and used as an
 integral part of a system Environmental benefits are gained when energy is conserved and heat pumps can make a major
 contribution in this area However some heat pumps use working fluids which are environmentally unfriendly and the
 progress that has been made in the field of alternative refrigerants is reported on The volume will prove an indispensable
