Multimodal Literacies Across Digital Learning Contexts Maria Grazia Sindoni, Ilaria Moschini, 2021-11-29 This collection critically considers the question of how learning and teaching should be conceived understood and approached in light of the changing nature of learning scenarios and new pedagogies in this current age of multimodal digital texts practices and communities The book takes the concept of digital artifacts as being composed of multiple meaning making semiotic resources such as visuals music and design as its point of departure to explore how diverse communities interact with these tools and develop and explore their understanding of digital practices in learning contexts The first section of the volume examines different case studies in which involved participants learn to grapple with the introduction of digital tools for learning in children s early years of schooling The second section extends the focus to secondary and higher education settings as digital learning tools grow more complex as do students parents and teachers interactions with them and the subsequent need for new pedagogies to rethink these multimodal artifacts A final section reflects on the implications of new multimodal tools technologies and pedagogies for teachers such as on teacher training and community building among educators In its in depth look at multimodal approaches to learning as meaning making in a digital world this book will be of interest to students and scholars in multimodality English language teaching digital communication and education

Microbial Control of the Nitrogen Cycle Lourdes Girard, Juan Sanjuan, Maria J. Delgado, 2020-07-02 **Application of Plant Biodiversity for Improving Nutrient Cycling** Katja Witzel, Christoph Martin Geilfus, Christian Roger Marc Hermans, 2022-11-14 The current agricultural plant production system is dominated by mono cropping with genetically uniform cultivars This genetic erosion has led to a displacement of locally adapted landraces and cultivars and poses a serious threat to plant productivity in stressed agro ecosystems The adaptation of crops to drought heat salinity and low soil fertility is becoming paramount due to global climate change Utilizing exotic or underused germplasms as a source of adaptive traits is a largely untapped way to ensure a stable yield The task to apply biodiversity in crop production to confer food security and sustainability was acknowledged by the Food and Agriculture Organization of the United Nations and reflected by the United Nations Sustainable Development Goals In many parts of the world poor soil fertility threatens yield stability Therefore the soil nutrient reserve must be replenished to sustain crop yield Mineral fertilizer in excess however is detrimental to the environment For instance elevated loads of nitrogen phosphorus or chlorine pollute water bodies and impact on biodiversity Major anticipated concerns for our agricultural systems are the limitation in phosphorus temperature increase extreme and unpredictable weather events and salinity Therefore environmentally friendly strategies to optimize nutrient cycling are urgently required and this involves increasing nutrient use efficiency In the face of climate change it is necessary to mine crop biodiversity to increase nutrient uptake and usage and to help implement a Zero Waste concept in plant nutrition This Research Topic is intended to provide an updated view on the use of crop biodiversity to open new

avenues for improved nutrient cycling We welcome contributions Original Research Review Mini Review and Perspective covering any of the following aspects Studies on improving nutrient fluxes through control of production factors both in controlled environments and in the field horticulture agriculture Screening and application of genebank material for improved nutrient use efficiency Studies on the effect of combining novel crop species multi cropping intercropping rotations cover cropping on crop performance and nutrient availability Effect of mutualistic species mycorrhiza or bacteria on nutrient cycling e g improvement of nutrient uptake and by mutualism Climate change driven effects on nutrient cycling e g how do different temperatures precipitation influence nutrient cycling through soils

Fermentation Biotechnology for Functional Foods Kalidas Shetty, Lena Gálvez Ranilla, 2025-10-31 Fermentation based processing advanced with global food systems as humanity started to organize the domestication of agriculture from plant and animal sources These advances emerged across regions of the world from river valley civilizations in Asia Mesopotamia India and China and Africa Egypt to Meso American civilizations As food crops and animal foods emerged from domestication to advancements in post harvest processing stages growth of invisible microbial systems led to modified foods that aligned with local palates of the communities This in several cases became part of food systems as it added a mode of preservation and improved the food quality that was preferred by each community This is how the early genesis of fermented foods from grains fruits and vegetables to animal meats and milk products became an integral part of early civilizations over 4000 years ago and has now carried over and further developed across many countries in every region of the world The foundations of these food fermentations are now an integral part of modern food advances as preferred food substrates and the microbial interactions that drive the metabolic processes in defined food matrixes are being scientifically advanced This book focuses on bringing together diverse emergences and advancements of fermented foods across different regions of the world and how the metabolic processes associated with fermentation in several cases add health relevant functional qualities across different food matrixes This book contains 26 chapters from the Americas Africa Europe and Asia bringing together the fermentation processes of diverse food substrates and their microbial processing and in several cases providing health targeted functional benefits Key Features Discusses the rationale and basis of fermented food systems from across 26 diverse regions of the world with examples from the Americas Asia Europe and Africa Presents historical plant and animal food substrates and the metabolic processes of their fermentation across traditions of a range of countries Covers traditional food fermentations across diverse food substrates that have potentially health relevant functional benefits Reflects and presents the role of historical cultural and traditional food concepts of a diverse range of countries with many novel examples and how they have influenced health relevant functional benefits Discusses the relevance of metabolic concepts of fermented and functional foods in advancing healthy food concepts This book is important for food scientists nutritionists and the health care sector but beyond this it is also relevant for a wider global audience interested in a holistic health approach from food systems where examples of fermentation experience can inform new natural processing strategies to improve food quality and health

Biomimetic Materials for Tissue Regenerations, 2nd edition Mariappan Rajan,Stevo J. Najman,Naresh Kumar Rajendran,2022-10-20 In tissue engineering the ultimate goal is to engineer an entire functioning organ that requires building complex structures of different tissue types A three dimensional scaffold seeded with desired cell types In order to resemble the natural formations of the organs cells have to be correctly located in relation to one another It has been shown in cocultures that cells have the capability of spontaneous tissue like organization when seeded into the scaffold The ideal scaffolds should have an interconnected porous structure well designed pore size and adequate porosity to allow cell attachment proliferation and differentiation Moreover effective bioactive agents and nutrient exchange are crucial during new tissue development Thus the individual organ cell is a specific mechanism for the construction or regeneration of the cells Artificial scaffolds have been applied and used as supporting structures for cell cultures as well as for the domination of cell growth in the repair of impaired tissues or organs During the cell regeneration the scaffold temporarily helps in cell regeneration and gradually biodegrade either in the course of the healing process or after and a new tissue with a desired shape and properties is produced The challenge of tissue engineering is to mimic what happens in nature Attempts are being made to engineer in vitro practically every tissue and organ in the body Work is proceeding in creating tissue engineered liver nerve kidney intestine pancreas and even heart muscle and valves In the area of connective tissues work has been ongoing worldwide for many years in the engineering of tendon ligament bone and cartilage Recently the number of reports was succeeded in skin bladder airway and bone where tissue engineered constructs have been used successfully in patients This Research Topic is the collection of body organ regeneration materials and their cell adhesion and migration for the development and regeneration of tissues Biomimetic materials promise to advance in current understanding of organ

regeneration and repair by providing tools to recapitulate and monitor relevant properties of cellular microenvironment interactions. Although cell adhesion, migration and development aspects of tissues have shown success in the clinic, better, more intricate models are needed to understand drivers of tissue repair and regeneration fully. Tissue engineering bears tremendous potential toward gaining a complete understanding of the underlying biological and physical mechanisms advancing the treatment of damaged organs. The following Research Topic, **Bio mimetic materials for tissue regenerations**, discusses examples of progress toward this objective. **Bio mimicking scaffold materials for tissue regeneration**, **Cell adhesion to scaffold materials**, **Role of materials for the migration of cells**, **Mechanisms of cell growth for organ development**. **Wheat Biofortification to Alleviate Global Malnutrition** Om Prakash Gupta, Velu Govindan, Alexander Arthur Theodore, Henrik Brinch-Pedersen, Miroslav Nikolic, Victor Taleon, 2022-11-03 *Integrative Genomics and Network Biology in Livestock and other Domestic Animals* David E. MacHugh, Robert J. Schaefer, 2020-09-11 This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series; they are collections of at least ten articles all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area. Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org/about/contact. **Adaptations to Subterranean Environments** Enrico Lunghi, Matthew Niemiller, Helena Bilandzija, 2024-01-15 *The Wildlife Gut Microbiome and Its Implication for Conservation Biology* Lifeng Zhu, Simon Bahrndorff, Jianjun Wang, 2021-08-19 **Women in Microorganisms in Vertebrate Digestive Systems: 2023** Karolina Skonieczna-Żydecka, Ekaterina Avershina, Rebeca Martín, 2025-05-27 Please note that to be considered for this collection, the first author or at least one corresponding author should be a researcher who identifies as a woman. After the well-received 2022 collection, Frontiers in Microbiology is proud to host this Research Topic celebrating women's work and achievements in the field of Microorganisms in Vertebrate Digestive Systems. Alongside International Women's Day and Women's History Month 2023, we will collectively embrace equity in the microbiology community. There is continued gender disparity within core STEM subjects. According to UNESCO Institute for Statistics, just 33% of the world's researchers are women. While the number of women attending university is growing, they still represent the minority of doctoral students and researchers. Women remain underrepresented in the highest level of academia, holding just 26% of full professorships. This is even more skewed in industry, with just 3% of STEM industry CEOs being women. As highlighted by UNESCO, science and gender equality are essential to ensure sustainable development. This Research Topic will act as a platform to promote the work of female researchers across the entire breadth of Microorganisms in Vertebrate Digestive Systems, including diversity and abundance of mutualistic commensal and pathogenic microorganisms in the vertebrate digestive tract, dynamics of microbial communities in relation to age, diet, and

catastrophic events injuries and interventions such as fecal transplants Biological chemical and physical stressors including the effects of probiotics on microbiome composition and dynamics Gastrointestinal microbiome composition and its relationship with the host immune system and health This Research Topic is open for submissions including Original Research Reviews Mini Reviews Methods Opinion and Perspective articles All manuscripts will be handled by female editors Any articles focused on research metrics and gender perspectives or bias in scientific publications would be best suited in Frontiers in Research Metrics and Analytics journal
