

# Sample Collection : Samples with High hematocrits

- According to the latest CLSI (formerly NCCLS) guideline on coagulation testing, it is important to adjust the sodium citrate volume when a patient's hematocrit is greater than 55%.
- Examples of patients who may have elevated hematocrit values are newborns or people with polycythemia vera.
- NCCLS\* recommends adjusting anticoagulant ratio for patients with hematocrits exceeding 55%
- High hematocrits may cause falsely prolonged test results due to an over- anticoagulated sample
- Formula correction achieves a 40% hematocrit

*The New Dimensions of Warfarin Prophylaxis* Stanford Wessler, 2013-06-29 The International Symposium on The New Dimensions of Warfarin Prophylaxis held on October 16 18 1986 in New York City was conceived as a forum to bring together physicians and other scientists knowledgeable about the pharmacological effects of warfarin on the hemostatic mechanism and the clinical usefulness of this compound in the prevention of thromboembolic phenomena The coumarin compounds have commanded a striking breadth of interest among members of the biomedical research community for almost one half century Aspects of its effects on the vitamin K dependent proteins on the laboratory recognition of the drug's pharmacologic action and its use as a therapeutic agent in a variety of disease states have been actively studied with increasing intensity in the past several decades Thus the present state of these studies seemed to be a timely subject for discussion not only to gather together in one place representative samples of the myriad of data on warfarin but also to underscore the ever increasing necessity for communication between basic research and clinical practice The content and organization of this monograph reflect the scope and importance of warfarin prophylaxis One of the unique aspects of this publication is that it spells out in one place the warfarin story from molecular biology through clinical trials to future directions of research and patient care

**Laboratory Techniques in Thrombosis — a Manual** J. Jespersen, R.M. Bertina, F. Haverkate, 2013-12-01 The first edition of this manual appeared in 1992 and was entitled ECAT Assay Procedures It was the result of a unique cooperation between experts brought together by the European Concerted Action on Thrombosis and Disabilities ECAT The Concerted Action was at that time under the auspices of the Commission of the European Union The second edition like the first edition deals with diagnostic tests within the field of thrombosis However the second edition has a broader scope because it is no longer limited by the frontiers of ECAT Experts all over the world in and outside ECAT have contributed to this edition The editors are very grateful for their contributions The need for a new edition is obvious Since 1992 new assays have been introduced for research diagnosis and therapy of thrombosis for other assays improvements have been suggested while a few others became redundant The editors waived the radioimmunoassays of thromboglobulin and platelet factor 4 due to the fact that the kits required for these assays are rarely or no longer available Also the PAI 1 activity assay was waived as it is liable to many inconsistencies and to large variations A list of names and addresses of manufacturers marketing the kits and reagents has been compiled together with a list of the recommended nomenclature of quantities in thrombosis and haemostasis in order to facilitate the use of the updated version These lists have been carefully compiled by Johannes J Sidelmann PhD Department of Clinical Biochemistry in Esbjerg Denmark      *Samples: From the Patient to the Laboratory* Walter G. Haverkate,2012-12-06 This book offers a description of current and recently developed laboratory assays in the field of haemostasis and thrombosis It is the result of a unique cooperation between experts from more than 60 institutes in 12 European countries brought together by the ECA T European Concerted Action on Thrombosis and Disabilities under the auspices of the Commission of the European Communities in Brussels Belgium The ECAT which was initiated in 1981 designed and performed three prospective clinical studies to establish haemostatic factors as risk indicators of thrombosis Included were patients with angina pectoris at risk from myocardial infarction patients undergoing angioplasty at risk from re stenosis and patients receiving hip replacement at risk from deep venous thrombosis Assay procedures were chosen training courses for technicians held and essential reagents were supplied from a central source A quality control assessment scheme served to compare assay results both within and between laboratories In the angina pectoris study centres determined most of the assays locally in the other two studies assays were performed centrally The need for further quality assessment in Europe Dr J F Davidson in Glasgow led to a separate activity coordinated by including coagulation inhibitors and plasminogen as risk factors for familial venous thrombosis The Editors hope the ECA T Assay Procedures book will contribute to further harmonization of haemostasis assays and ultimately to their standardization **Blood Coagulation and Haemostasis** Jean M.
