Handbook of Approximate Bayesian Computation Scott A. Sisson, Yanan Fan, Mark Beaumont, 2018-09-03 As the world becomes increasingly complex so do the statistical models required to analyse the challenging problems ahead For the very first time in a single volume the Handbook of Approximate Bayesian Computation ABC presents an extensive overview of the theory practice and application of ABC methods These simple but powerful statistical techniques take Bayesian statistics beyond the need to specify overly simplified models to the setting where the model is defined only as a process that generates data This process can be arbitrarily complex to the point where standard Bayesian techniques based on working with tractable likelihood functions would not be viable ABC methods finesse the problem of model complexity within the Bayesian framework by exploiting modern computational power thereby permitting approximate Bayesian analyses of models that would otherwise be impossible to implement The Handbook of ABC provides illuminating insight into the world of Bayesian modelling for intractable models for both experts and newcomers alike It is an essential reference book for anyone interested in learning about and implementing ABC techniques to analyse complex models in the modern world

Stochastics of Environmental and Financial Economics Fred Espen Benth, Giulia Di Nunno, 2015-10-23 These Proceedings offer a selection of peer reviewed research and survey papers by some of the foremost international researchers in the fields of finance energy stochastics and risk who present their latest findings on topical problems The papers cover the areas of stochastic modeling in energy and financial markets risk management with environmental factors from a stochastic control perspective and valuation and hedging of derivatives in markets dominated by renewables all of which further

develop the theory of stochastic analysis and mathematical finance The papers were presented at the first conference on Stochastics of Environmental and Financial Economics SEFE being part of the activity in the SEFE research group of the Centre of Advanced Study CAS at the Academy of Sciences in Oslo Norway during the 2014 2015 academic year

Hydrogen Peroxide Metabolism in Health and Disease Margreet C M Vissers, Mark Hampton, Anthony J.

Kettle, 2017-10-19 Much of the biology of oxidative stress and oxidative signalling centres on the generation and handling of hydrogen peroxide The overall aim for this book would be to provide an insightful and useful forum to assist with the understanding of the relevance of hydrogen peroxide generation and how this is managed in human biology The target audience would be those who currently have an interest in the generation of ROS but who do not have expertise in chemistry as well as those experts in the chemistry of oxidative stress but without detailed understanding of the biologically relevant setting We would aim to bridge the gap in understanding between chemistry and biology Conservation and Management

Penteriani, Arie Trouwborst, 2021-06-29 Advances in Credit Risk Modeling and Management Frédéric Vrans, 2020-07-01

Credit risk remains one of the major risks faced by most financial and credit institutions It is deeply connected to the real economy due to the systemic nature of some banks but also because well managed lending facilities are key for wealth creation and technological innovation This book is a collection of innovative papers in the field of credit risk management Besides the probability of default PD the major driver of credit risk is the loss given default LGD In spite of its central importance LGD modeling remains largely unexplored in the academic literature This book proposes three contributions in the field Ye Bellotti exploit a large private dataset featuring non performing loans to design a beta mixture model Their model can be used to improve recovery rate forecasts and therefore to enhance capital requirement mechanisms Francois uses instead the price of defaultable instruments to infer the determinants of market implied recovery rates and finds that macroeconomic and long term issuer specific factors are the main determinants of market implied LGDs Cheng Cirillo address the problem of modeling the dependency between PD and LGD using an original urn based statistical model Fadina Schmidt propose an improvement of intensity based default models by accounting for ambiguity around both the intensity process and the recovery rate Another topic deserving more attention is trade credit which consists of the supplier providing credit facilities to his customers Whereas this is likely to stimulate exchanges in general it also magnifies credit risk This is a difficult problem that remains largely unexplored Kanapickiene Spicas propose a simple but yet practical model to assess trade credit risk associated with SMEs and microenterprises operating in Lithuania Another topical area in credit risk is counterparty risk and all other adjustments such as liquidity and capital adjustments known as XVA Chataignier Crpey propose a genetic algorithm to compress CVA and to obtain affordable incremental figures Anagnostou Kandhai introduce a hidden Markov model to simulate exchange rate scenarios for counterparty risk Eventually Boursicot et al analyzes CoCo

bonds and find that they reduce the total cost of debt which is positive for shareholders In a nutshell all the featured papers contribute to shedding light on various aspects of credit risk management that have so far largely remained unexplored

Seafloor heterogeneity: Artificial structures and marine ecosystem dynamics - recent advances Toyonobu Fujii, Victoria Louise Georgia Todd, Daniel Joseph Pondella, Andrew James Guerin, 2023-04-26 **The Instability of Truth** Rebecca Lemov, 2025-03-25 An acclaimed historian of science uncovers the hidden history of brainwashing and its troubling implications for today Because brainwashing affects both the world and our observation of the world we often don't recognize it while it's happening unless we know where to look As Rebecca Lemov writes in *The Instability of Truth* Brainwashing erases itself What we call brainwashing is more common than we think it is not so much what happens to other people as what can happen to anyone *The Instability of Truth* exposes the myriad ways our minds can be controlled against our will from the brainwashing techniques used against American POWs in North Korea to the soft brainwashing of social media doomscrolling and behavior shaping In our increasingly data driven world anyone can fall victim to mind control Lemov identifies invasive forms of emotional engineering that exploit trauma and addiction to coerce and persuade in everyday life Tracing the word brainwashing from deep in the files of an operative of the U S Office of Strategic Services in the 1950s to the pioneering research of Robert Jay Lifton to the public trials of cult leaders and the case of Patty Hearst Lemov also studies how the idea of mind control has spread across the globe and penetrated courtrooms secret labs military schools and today's digital sites *The Instability of Truth* offers lessons from mind control episodes past and present Truth is always subject to question in more mundane walks of life than most people believe and Lemov equips us for the increasing challenges we face from social media AI and an unprecedented global form of surveillance capitalism *The Instability of Truth* develops a rigorous new understanding of both brainwashing's paradoxes and its emotional roots by giving voice to brainwashers the brainwashed and third party observers alike **Spacematrix** Meta Berghauser Pont, Per Haupt, 2023-05-23 *Spacematrix* explores the potential of urban density as a tool for urban planning and design This revised and extended edition of Meta Berghauser Pont and Per Haupt's 2010 volume includes an extensive analysis of the relations between density urban form and performance a prerequisite for understanding and successfully predicting the effects of specific designs and planning proposals The density database that is an integral part of the book has been expanded and now includes 142 examples from five capitals in Europe as well as examples from Asia Berghauser Pont and Haupt demystify the use of concepts such as urbanity compact city and park city by challenging the reliability of such concepts and critically examining the possibility of redefining them through quantification using multiple density measures *Spacematrix* is of interest to professionals working in the field of urbanism such as architects urban planners and designers as well as developers economists engineers and policymakers It also offers researchers a method to quantitatively describe urban form and connect this to a wide range of performances **Liver Pathophysiology** Pablo Muriel, 2017-03-02 *Liver*

Pathophysiology Therapies and Antioxidants is a complete volume on morphology physiology biochemistry molecular biology and treatment of liver diseases It uses an integral approach towards the role of free radicals in the pathogenesis of hepatic injury and how their deleterious effects may be abrogated by the use of antioxidants Written by the most prominent authors in the field this book will be of use to basic and clinical scientists and clinicians working in the biological sciences especially those dedicated to the study and treatment of liver pathologies Presents the most recent advances in hepatology with a special focus on the role of oxidative stress in liver injury Provides in vivo and in vitro models to study human liver pathology Explains the beneficial effects of antioxidants on liver diseases Contains the most recent and modern treatments of hepatic pathologies including but not limited to stem cells repopulation gene therapy and liver transplantation The SAGE

of Amniotes Jörg Fröbisch, Mark Joseph MacDougall, Michel Laurin, Sean P. Modesto, Robert R. Reisz, 2025-09-08 Amniotes comprise all fully terrestrial vertebrates and include extant squamates turtles crocodiles birds and mammals The origin of amniotes tightly linked to the amniotic egg as a key innovation represents a major transition in the evolutionary history of tetrapods Amniotes first appeared in the fossil record about 318 million years ago and their early evolution diversification ecology and phylogenetic relationships have received considerable and increasing interest and research attention over the past decades Recently several new hypotheses regarding early amniote interrelationships have been proposed and it is now apparent that the origin and early evolution of Amniota is not as clear as was previously thought In order to better understand early amniote evolution and test existing hypotheses it is critical to continue expanding upon past work with the addition of new data and application of modern technologies and approaches

Role of CD1- and MR1-restricted T cells in Immunity and Disease Kazuya Iwabuchi, Luc Van Kaer, 2019-10-18 CD1 and MR1 are major histocompatibility complex MHC class I related proteins that bind and present non peptide antigens to subsets of T cells with specialized functions CD1 proteins typically present lipid antigens to CD1 restricted T cells whereas MR1 presents vitamin B based ligands and a variety of drugs and drug like molecules to MR1 restricted T cells The CD1 family of antigen presenting molecules has been divided into two groups Group 1 contains CD1a CD1b and CD1c and Group 2 contains CD1d Additionally CD1e is expressed intracellularly and is involved in the loading of lipid antigens onto Group 1 CD1 proteins Humans express both Groups 1 and 2 CD1 proteins whereas mice only express CD1d Group 1 CD1 proteins present lipid antigens to T cells that generally express diverse T cell receptors TCRs and exhibit adaptive like functions whereas CD1d presents lipid antigens to subsets of T cells that express either diverse or highly restricted TCRs and exhibit innate like functions CD1d restricted T cells are called natural killer T NKT cells which includes Type I or invariant NKT iNKT cells expressing semi invariant TCRs and Type II NKT cells expressing more diverse TCRs CD1 restricted T cells have been implicated in a wide variety of diseases including cancer infections and autoimmune inflammatory and metabolic diseases Additionally NKT cells have been targeted for immunotherapy of disease with ligands such as galactosylceramide for iNKT cells or sulfatide for Type II NKT cells Like iNKT cells MR1 restricted T cells express semi invariant TCRs and display innate like functions MR1 restricted T cells also called mucosal associated invariant T MAIT cells have been implicated in immune responses against a variety of pathogens such as Mycobacterium tuberculosis Pseudomonas aeruginosa Helicobacter pylori hepatitis C virus and influenza virus Moreover these cells contribute to autoimmune and inflammatory diseases including colitis rheumatoid arthritis psoriasis lupus and diabetes
