

The science of the Niagara Falls

- The current rate of erosion is about 3 – 4 inches every 10 years so scientists think that the Niagara Falls will be gone in 50,000 years.
- The Niagara Falls water power is shared between the U.S. and Canada. Today, Niagara is the biggest electricity producer in New York state – generating enough power to light 24 million bulbs at once, and saves the state's residents and businesses hundreds of millions of dollars a year.
