Nickel Metal Hydride (NiMH) Batteries

Observe the following guidelines when using Nikon EN-ELH1 and EN-ELH2 NiMH batteries.

- Observe rechargeable battery safety charges. At all times, avoid shorting the battery or the EN-ELH1 or EN-ELH2 battery charger battery lead set.

⚠ Battery may become hot when charged. Observe the cautions after handling batteries during or after charging. Batteries may become hot after charging, and in other circumstances, after charging under some conditions. This is normal and does not indicate a problem.

- New batteries and batteries that have been left unused for an extended period tend to lose their charge rapidly; this is normal for NiMH batteries and the batteries will reach a charge after being used and recharged several times.

Batteries will become even warmer to touch when fully charged.

- The battery and charger terminals are covered thoroughly with a protective film. Before charging, remove the protective film and other debris that can damage the battery, charger, or camera.
- They are charged at an ambient temperature of 10–30°C (50–86°F).
- They are not recharged until fully recharged (just until the orange LED light comes on) to prevent the battery from being overcharged.
