Re-Creating Nature James T. Bradley,2019-09-24 An exploration of the moral and ethical implications of new biotechnologies Many of the ethical issues raised by new technologies have not been widely examined discussed or indeed settled For example robotics technology challenges the notion of personhood Should a robot capable of making what humans would call ethical decisions be held responsible for those decisions and the resultant actions

Should society reward and punish robots in the same way that it does humans Likewise issues of safety environmental concerns and distributive justice arise with the increasing acceptance of genetically modified organisms GMOs in food production nanotechnology in engineering and medicine and human gene therapy and enhancement The problem of dual use when a technology can be used both to benefit and to harm exists with virtually all new technologies but is central in the context of emerging 21st century technologies ranging from artificial intelligence and robotics to human gene editing and brain computer interfacing In *Re Creating Nature Science Technology and Human Values in the Twenty First Century* James T Bradley addresses emerging biotechnologies with prodigious potential to benefit humankind but that are also fraught with ethical consequences Some actually possess the power to directly alter the evolution of life on earth including human Specifically these topics include stem cells synthetic biology GMOs in agriculture nanotechnology bioterrorism CRISPR gene editing technology three parent babies robotics and roboethics artificial intelligence and human brain research and neurotechnologies Offering clear explanations of these various technologies a pragmatic presentation of the conundrums involved and questions that illuminate hypothetical situations Bradley guides discussions of these and other thorny issues resulting from the development of new biotechnologies He also highlights the responsibilities of scientists to conduct research in an ethical manner and the responsibilities of nonscientists to become science literate in the twenty first century
