NIH Grant Proposal Guidelines

This guide is organized according to the major sections of the National Institutes of Health Grant Application Instructions (SF424). This document is not exhaustive and should not be used as a replacement for a thorough review of federal guidelines and advice and guidance from experienced colleagues and Biomurtich Center staff. It is largely based on a summary guide for grant applications[1] provided by the National Institutes of Health.

Project Summary/Abstract

The purpose of the project summary/abstract is to succinctly describe every major aspect of your proposed project. It should contain a statement of objectives and proposed methods. Consider the significance and innovation of the proposed research when preparing the project summary.

The second component of the project summary is a description of your proposal's relevance to public health. Use plain language that can be understood by a general audience, and don't include any proprietary or confidential information.

The summary must be no longer than 30 lines of text and follow the required font and margin specifications (use Arial, Helvetica, Palatino Linotype, or Georgia typefaces, a black font color, and a font size of 11 or 12 points; margins must be set at 0.5 inches on all sides of the document).

The abstract should include the following components:

- brief background of the project
- specific aims, objectives, or hypotheses
- significance and relevance of the proposed research to public health
- unique features and innovation of the project
- methodology to be used
- expected results
- description of how your results will affect other research areas

Be succinct but include all necessary information. Avoid describing your past accomplishments, and avoid using the first person. A good strategy is to write your abstract last as it reflects the entire proposal.

Research Plan

The research strategy/plan is organized into three sections: significance, innovation, and approach. The assessment of this research plan will largely determine whether or not your application is favorably recommended for funding. For an application with multiple specific aims, you may address the significance, innovation, and approach for each aim individually or address all the aims collectively.

Length requirements vary depending on the grant format (for example, R01 grants must not exceed 12 pages). Visit the NIH Grants website[2] for detailed information on page length restrictions for varying application types and sections.
