Asmus, Marta Castillejo, Paraskevi Pouli, Austin Nevin, 2010-12-01 Laser techniques offer possibilities for the examination and conservation of artwork and for the prevention of cultural heritage This collection of peer reviewed papers from the 8th International Conference on Lasers in the Conservation of Artworks Sibiu Romania September 21 25 2009 addresses various aspects of cultural heritage preservation **Traumatic Injuries in the Nervous System** Mårten Risling, This Research Topic surrounds the information presented at the upcoming conference Neurotrama Symposium held at the Centre for Trauma Research September 15 16 2010 Traumatic injury to the central nervous system CNS is the leading cause of death and disability for people up to about 40 years of age Examples and experiences of CNS trauma and medical care during historic and ongoing wars will be given referring to the early history of Karolinska Institutet KI **Marine Benthic Nematode Molecular Protocol Handbook (nematode Barcoding)** , 2011 **Inorganic Constituents in Soil** Masami Nanzyo, Hitoshi Kanno, 2018-10-16 This open access book is a must read for students of and beginners in soil science In a well organized and easy to follow manner it provides basic outlines of soil minerals new methods and recent developments in the field with a special focus on visual aids The chapters on primary minerals secondary minerals non crystalline inorganic constituents and inorganic constituents sensitive to varying redox conditions will help readers understand the basic components of soils Further readers are introduced to new analytical methods with the aid of microscopy and recent developments in the field Uniquely the book features case studies on the identification and isolation methods for vivianite crystals from paddy field soils as well as a useful procedure for identifying noncrystalline constituents such as volcanic glasses and plant opals which can also be applied to other soils depending on the local conditions Given its focus and coverage the book will be useful to all readers who are interested in agronomy plant production science agricultural chemistry and environmental science In addition it can help biogeochemists further expand their research work on the rhizosphere of wetland plant roots iron and phosphate dynamics etc *Olfaction* Edgar Soria-Gómez, 2020-12-29 Our senses shape our reality and allow us to adapt to the everlasting changing environment From all sensory modalities olfaction is maybe the most intriguing one probably because olfactory information influences our daily life without us even noticing However we can all relate to the powerful impact that the smell of our favorite food has on us Likewise olfactory cues could be determinants for partner selection because love can be blind but not anosmic mood regulation and cognition Furthermore recent studies link early olfactory dysfunctions to the occurrence of devastating pathologies such as Alzheimer s and

Parkinson's Thus the study of olfaction at different levels from genetics to behavior will pave the way for a better understanding of brain processes and associated disorders

Neuroactive metabolites of ethanol: a behavioral and neurochemical synopsis Merce Correa, John D Salamone, Elio Acquas, 2015-02-11 Ethanol is a very elusive drug which has mechanisms of action that are diverse and relatively non selective Moreover ethanol has been demonstrated to be a biologically active substance by itself but also a pro drug of the neuroactive metabolites acetaldehyde and acetate Acetaldehyde has traditionally been known as a toxic substance with several effects on multiple systems However in the last few decades evidence has accumulated to reveal the specific and in some instances distinct neural actions of acetaldehyde and acetate that are in part responsible for some of the observed psychoactive effects of ethanol The present issue will address these challenges to provide an up to date synopsis of the behavioral and neurophysiological impact of the two direct metabolites of ethanol acetaldehyde and acetate In doing so this issue will present human and rodent evidence on their behavioral and neurophysiological impact either when administered alone as drugs or when metabolically derived from their parent compound Emphasis will be placed to stress the importance of the different enzymatic systems that intervene to produce these metabolites either peripherally and or directly in the brain Similarly this Research Topic will be aimed at addressing some of the possible mechanisms of action of acetaldehyde and acetate in different brain areas and in different intracellular systems Furthermore the issue will lay out some of the suggested mechanisms of action of ethanol and of its metabolites by which they form adducts with other molecules and neurotransmitters such as dopamine and opioids which lead to salsolinol and tetrahydropapaveroline respectively and their impact on the synthesis and actions of neuromodulators such as adenosine and the cannabinoid system
