

How to connect a subwoofer to an older amplifier or vintage receiver

SoundCertified.com

You can connect a subwoofer to an older amp or receiver without a subwoofer output a few ways. This depends mostly on the type of subwoofer you have.

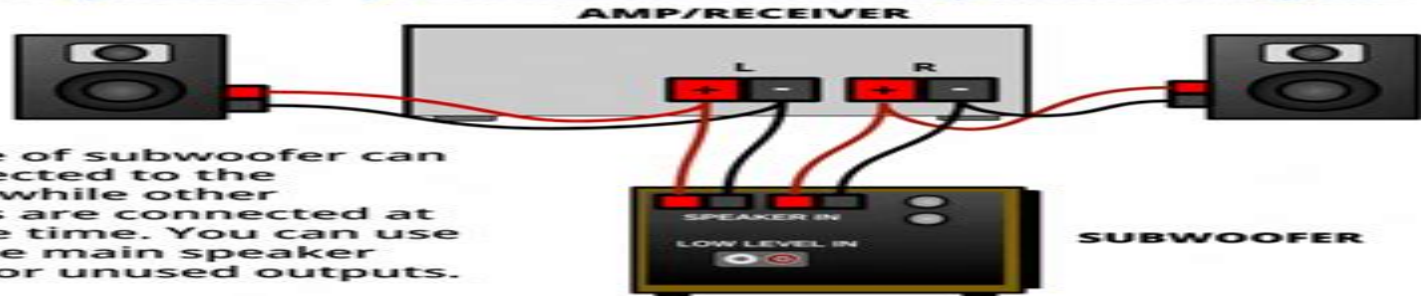

Example 1

Amp/receiver + powered subwoofer with RCA low level input.

Example 2

Amp/receiver + powered subwoofer with speaker level inputs.

This type of subwoofer can be connected to the receiver while other speakers are connected at the same time. You can use either the main speaker outputs or unused outputs.

This saves the cost of needing a signal converter.

Example 3

Amp/receiver + passive (non-powered) subwoofer enclosure

Passive (non-powered) subwoofer enclosures can be used with a receiver without subwoofer speaker outputs using a low-pass crossover connected in between. The number of crossovers (1 or 2) depends on the type of subwoofer used: dual voice coil or single voice coil (you need one for each).

This setup cannot be used with other speakers connected to the receiver speaker outputs at the same time.
