number of papers to be presented it was not possible to cover a much wider range of topics. However, an attempt was made to include the most important advances associated with the progress made in micromechanics in its application to material science and engineering over the past decade. Thus the topics are concerned with the fundamental aspects of the thermodynamics of structured solids part I the micromechanical behaviour of alloys part II the modelling of the material behaviour on the basis of continuum theory part III and finally the important new approach to the characterization of various materials and their responses to external agencies by the use of probabilistic micromechanics part IV.
