Reliability Analysis of Wireless Automotive Applications with Transceiver Redundancy Roshan Chulyada, 2016-04-20 Master s Thesis from the year 2014 in the subject Engineering Automotive Engineering grade 1 7 University of Applied Sciences Rosenheim University of Applied Science course Electrotech language English abstract In this thesis the Failure Mode and Effect Analysis FMEA methodology is implemented for failure analysis in wireless automotive systems Reliability analysis is done by using Reliability Block Diagrams RBD These analyses are performed to develop redundant systems The main focus of this thesis is to make the system behavior fail operation using wireless technology The implementation of algorithms and protocol design has been done with an MSPEXP430 board and a CC2520 transceiver to detect single point failures The implementations were then tested to detect different failure levels successfully In this modern age a car has different functionalities and facilities The implementation is done by using different actuators sensors and Electronics Control Units ECUs Due to the high complexity of wiring and addition of weight to a car controlling and maintaining these devices is difficult As a solution for these complexities and the problem of weight growth wireless technology has been used with the TDMA method The approach for replacing wire by wireless technology may however not be secure and reliable
