

3.2a Disengage the accelerator inner cable from the throttle cam . . .

3.2b . . . and withdraw the outer cable from the rubber grommet on the mounting bracket

3.9 Accelerator outer cable retaining clip (arrowed)

Refitting

12 Refitting is a reversal of removal but renew the air cleaner filter element, as described in Chapter 1, if necessary.

3 Accelerator cable – removal, refitting and adjustment

Note: An accelerator cable is only used on SOHC (8-valve) engines. On DOHC (16-valve) engines, a 'drive-by-wire' system is employed, whereby the throttle valve is operated by a throttle valve actuator incorporated in the throttle body. The system is controlled by the engine management ECU using signal inputs from the accelerator pedal potentiometer.

Removal

- 1 Remove the air cleaner assembly as described in Section 2.
- 2 Disengage the inner cable from the throttle cam, and withdraw the outer cable from the rubber grommet on the mounting bracket (see illustrations).
- 3 Working back along the length of the cable, free it from any retaining clips or ties, noting its correct routing.
- 4 From under the fascia, inside the car, unhook the cable from the fork at the top of the pedal arm.

4.3 Accelerator pedal retaining bolts (arrowed) – DOHC (16-valve) engines

- 5 Release the bulkhead grommet and withdraw the accelerator cable from inside the engine compartment.

Refitting

- 6 Feed the accelerator cable through the bulkhead grommet, then return to the car and locate the inner cable end fitting in the pedal arm.
- 7 From within the engine compartment, work along the cable, securing it in position with the retaining clips and ties, and ensuring that the cable is correctly routed.
- 8 Pass the outer cable through its throttle body mounting bracket grommet, and reconnect the inner cable to the throttle cam. Adjust the cable as described below.

Adjustment

- 9 Extract the retaining clip from its groove in the outer cable (see illustration).
- 10 Ensuring that the throttle cam is fully against its stop, gently pull the cable out of its grommet until all free play is removed from the inner cable.
- 11 With the cable held in this position, refit the retaining clip to the last exposed outer cable groove in front of the rubber grommet. When the clip is refitted and the outer cable is released, there should be only a small amount of free play in the inner cable.
- 12 Have an assistant depress the accelerator pedal, and check that the throttle cam opens fully and returns smoothly to its stop.
- 13 On completion, refit the air cleaner assembly as described in Section 2.

4 Accelerator pedal – removal and refitting

Removal

SOHC (8-valve) engines

- 1 From under the fascia inside the car, unhook the accelerator cable from the fork at the top of the pedal arm.

- 2 Release the two retaining lugs and lift the pedal off the mounting bracket.

DOHC (16-valve) engines

- 3 From under the fascia inside the car, undo the two bolts securing the pedal and potentiometer assembly to the mounting bracket (see illustration).
- 4 Withdraw the pedal from its location, disconnect the potentiometer wiring connector, and remove the assembly from the car.

Refitting

- 5 Refitting is a reversal of removal. On SOHC (8-valve) engines check, and if necessary adjust, the accelerator cable as described in Section 3.

5 Fuel system – depressurisation

Note: Refer to the warning given in Section 1 before proceeding.

Warning: The following procedure will merely relieve the pressure in the fuel system – remember that fuel will still be present in the system components and take precautions accordingly before disconnecting any of them.

- 1 The fuel system referred to in this Section is defined as the tank-mounted fuel pump, the fuel rail, the fuel injectors, and the metal pipes and flexible hoses of the fuel lines between these components. All these contain fuel which will be under pressure while the engine is running and/or while the ignition is switched on. The pressure will remain for some time after the ignition has been switched off, and must be relieved before any of these components are disturbed for servicing work.
- 2 Disconnect the battery negative terminal (refer to Disconnecting the battery in the Reference Chapter).
- 3 Remove the air cleaner assembly as described in Section 2.
- 4 Locate the Schrader valve situated at the
