Social vs Solitary Olivia Clark, AI, 2025-02-26 Social vs Solitary delves into the fascinating world of animal behavior examining why some species thrive in social groups while others prefer a solitary existence Exploring the evolutionary advantages and disadvantages tied to different lifestyles the book reveals how factors like resource availability and environmental pressures shape these contrasting behaviors Intriguingly the evolution of altruism where animals act selflessly for the benefit of others is a key focus alongside understanding how competition impacts social structures The book adopts a comparative approach using case studies from insects to mammals to illustrate core principles It synthesizes established theories in behavioral ecology and evolutionary biology highlighting the physiological adaptations that come with different lifestyles By integrating ecological evolutionary and physiological perspectives Social vs Solitary presents a holistic view moving beyond simple comparisons to explore the intricacies of social and solitary behaviors The chapters progress from fundamental concepts to specific examples culminating in a discussion of implications for conservation biology offering a valuable resource for students researchers and anyone fascinated by the natural world

Towards an embodied science of intersubjectivity: Widening the scope of social understanding research Ezequiel Di Paolo, Hanne De Jaegher, 2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition This problem is understood as how we figure out other minds relying only on indirect manifestations of other people's intentional states which are assumed to be hidden private and internal Research on this question has mostly investigated how individual cognitive mechanisms achieve this task A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds These phenomena include acting and perceiving together verbal and non verbal engagement experiences of disconnection management of relations in a group joint meaning making intimacy trust conflict negotiation asymmetric relations material mediation of social interaction collective action contextual engagement with socio cultural norms structures and roles etc These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity the social mind writ large To contribute to this goal we encouraged contributions in psychology neuroscience psychopathology philosophy and cognitive science that

address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive from observational to participatory The Social Behavior of the Bees Charles Duncan Michener,1974

contribute to our understanding of unsustainable mass consumption. It addresses the role of identities, social relations, interactions, belonging, and status comparison, and how perceived time scarcity is both a cause and an effect of consumption. It examines the power of consumer norms and how overconsumption is normalized and shows how consumption is embedded in the time-space arrangements of everyday life. Magnus Boström contextualizes such drivers within the larger institutional and infrastructural forces underlying mass consumption, including the economy, growth, politics, and the problematic promises of consumer culture. Boström further draws on lessons from lived experiments of consuming less and discusses how insights about the flaws of consumer culture can help shape a growing critique and countermovement: a collective detox from consumerism.

Relationships, Well-Being and Behaviour Harry Reis, 2018-05-15. In the World Library of Psychologists series, international experts themselves present career-long collections of what they judge to be their finest pieces: extracts from books, key articles, salient research findings, and their major practical/theoretical contributions. In this fascinating volume, Harry Reis reflects on a career that has earned him an international reputation as an eminent scholar and pioneer in the field of relationship science through a selection of papers that illustrate the foundational theme of his research career: the importance of relationships for human well-being. The book charts the development of research in social psychology and relationship science through three key themes: from the relationship context of human behaviour through to the value of studying behaviour in its natural context, and finally intimacy and responsiveness in close relationships. Also featuring a newly written introduction by the author contextualizing the selections and offering an intimate overview of his career, this collection of key publications offers a unique and compelling insight into decades of groundbreaking work, making it an essential resource for all those engaged or interested in the psychology of relationships and well-being.

Perturbation, Behavioural Feedbacks, and Population Dynamics in Social Animals Daniel Oro, 2020. In social animals, perturbations may trigger specific behavioural responses with consequences for dispersal and complex population dynamics. Perturbations raise the need for information gathering in order to reduce uncertainty and increase resilience. Updated information is then shared within the group, and social behaviours emerge as a self-organized process. This social information factorizes with the size of the group, and it is finally used for making crucial decisions about, for instance, when to leave the patch and where to go. Indeed, evolution has favoured philopatry over dispersal, and this trade-off is challenged by perturbations. When perturbations accumulate over time, they may decrease the suitability of the patch and erode the philopatric state until crossing a tipping point beyond which most individuals decide to disperse to better areas. Initially, the decision to disperse is led by a few individuals, and this decision is copied by the rest of the group in an autocatalytic way. This feedback process of social copying is termed runaway dispersal. Furthermore, social copying enhances the evolution of cultural and technological innovation, which may cause additional nonlinearities for population dynamics. Social information gathering and social copying have also occurred in human evolution, especially after perturbations such as climate extremes and warfare. In summary, social feedback

processes cause nonlinear population dynamics including hysteresis and critical transitions from philopatry to patch collapses and invasions which emerge from the collective behaviour of large ensembles of individuals *Current Literature*, 1905 Cutting-edge Social Media Approaches to Business Education Charles Wankel, 2010-09-01 Our current students are digital natives born into a world of widespread online sharing Aligning the technologies we use in our courses with their skills and approaches to collaborative learning is an opportunity we should take The new media share text images audio and video material rapidly and interactively This volume will provide an overview of these new social media including Skype YouTube Flickr blogging LinkedIn Facebook and Twitter Examples and cases of how instructors around the world are meaningfully incorporating them into their management marketing and other business courses are provided One of the more robust trends is the use of three dimensional immersive virtual world interfaces for teaching and learning The leading one is Second Life Examples of the use of Second Life in business courses will be discussed The use of wikis to foster collaborative development of course related material by learners will be presented with case examples Faculty members are co creators of course content with their learners Among the topics covered is how faculty members can be supported in their deployment of social media projects and course structures How social media can enable the structuring of course activities involving students prospective students alumni employers businesspersons and others in rich sharing and support with each other will be discussed Indeed seeing courses as networking venues beyond learning forums will be parsed Psalms of the Social Life Cleland Boyd McAfee, 1916 Applied Jewish Values in Social Sciences and Psychology Michael Ben-Avie, Yossi Ives, Kate Loewenthal, 2015-12-01 This volume interweaves concepts and methods from psychology and other social sciences with Jewish ideas and practices in order to address contemporary social issues This volume brings together pioneering research from scholars in such fields as psychology education and religious studies The authors integrate insights from Jewish texts and practices with the methods and concepts of the social sciences to create interventions that promote the well being of children adults families communities and society Divided into three sections Education Psychological Well Being Society and Beyond this book shows how this integrationist approach can deepen our understanding and generate new insights around pressing social challenges to impact positive change in the lives of people and communities **Advances in Genomics and Epigenomics of Social Insects** Greg J. Hunt, Juergen R. Gadau, 2017-01-27 Social insects are among the most successful and ecologically important animals on earth The lifestyle of these insects has fascinated humans since prehistoric times These species evolved a caste of workers that in most cases have no progeny Some social insects have worker sub castes that are morphologically specialized for discrete tasks The organization of the social insect colony has been compared to the metazoan body Males in the order Hymenoptera bees ants and wasps are haploid a situation which results in higher relatedness between female siblings Sociality evolved many times within the Hymenoptera perhaps spurred in part by increased relatedness that increases inclusive fitness benefits to workers cooperating to raise their sisters and

brothers rather than reproducing themselves But epigenetic processes may also have contributed to the evolution of sociality The Hymenoptera provide opportunities for comparative study of species ranging from solitary to highly social A more ancient clade of social insects the termites infraorder Isoptera provide an opportunity to study alternative mechanisms of caste determination and lifestyles that are aided by an array of endosymbionts This research topic explores the use of genome sequence data and genomic techniques to help us explore how sociality evolved in insects how epigenetic processes enable phenotypic plasticity and the mechanisms behind whether a female will become a queen or a worker Comparative Social Evolution Dustin R. Rubenstein, Patrick Abbot, 2017-04-06 A comparative view of the major features of animal social life and the evolution of cooperative group living **Drinking Careers** Stephen J. Kunitz, Jerrold E.
