Soil and Water Engineering Balram Panigrahi, Megh R. Goyal, 2017-03-03 Modeling aspects have added a new dimension in research innovations in all branches of engineering In the field of soil and water engineering they are increasingly used for planning development and management of land and water resources including analysis of quantity and quality parameters of surface and ground water flood forecasting and control measures optimum allocation and utilization of irrigation water The application of these models saves considerable time in decision support systems and helps in conservation and optimum allocations of scarce precious natural resources

Modeling Methods and Practices in Soil and Water Engineering Balram Panigrahi, Megh R. Goyal, 2017-03-16 This book discusses the development of useful models and their applications in soil and water engineering It covers various modeling methods including groundwater recharge estimation rainfall runoff modeling using artificial neural networks development and application of a water balance model and a HYDRUS 2D model for cropped fields a multi model approach for stream flow simulation multi criteria analysis for construction of groundwater structures in hard rock terrains hydrologic modeling of watersheds using remote sensing and GIS and AGNPS

Irrigation Systems Engineering Balram Pannigrahi, 2011-01-15 This is a text book for agriculture and agricultural engineers and will be very much helpful for the beginning students in irrigation It is designed to guide students from a basic knowledge of soil mathematics hydrologic and hydraulics to the state of the art irrigation system design and management Since major and medium irrigation projects are too costly and at the same time are not eco friendly the major thrust of research is now being imparted on low cost and easy to construct farm irrigation structures The primary aim of the book is to design an optimum size small scale water harvesting structure which is the farm pond mostly used by the farmers in the farms My goal is to present the principles and concepts of farm irrigation in a simple manner to maximize the students

learning understanding and motivation The method and order of presentation have been carefully developed and classroom tested to make this book a useful and effective teaching tool The book will not only be a helping tool to the students and teachers in agriculture and agricultural engineering but also to all the practicing engineers agriculturists soil conservationists and agricultural extension workers who deal directly or indirectly with water management and other associated farm development works However the book cannot be used for design of complex hydraulic structures including dams and reservoir The book contains 23 solved problems 238 short and long type questions 42 tables 55 figures and more than 138 references which will be immensely helpful to the students and design engineer Several field experimental results have also been incorporated in the book at appropriate sections to make the book interesting for the readers
