

Sophisticated software handles all your measuring needs

• Missing line

• Remote elevation

• Three-dimensional coordinates

• Setting out

• Azimuth angle setting

Using the coordinates of the instrument station and backlight point, the horizontal circle can be set to an azimuth on the backlight and the azimuth calculated automatically.

• Resection

Based on the measured angles and distances of two known points, the SET6F calculates the coordinate value of the instrument station and the azimuth of the second target point.

• Horizontal angle and distance averaging

Maximize your productivity

■ Easy expansion via two-way data port

Thanks to its advanced two-way communications port, the SET6F enables you to use an external controller to access all instrument functions. Add Sokkia's renowned SDR33/31 Electronic Field Book, for example, and complex field operations such as traverse adjustment, intersection or area calculations and roading become remarkably simple. Our popular "roading" function lets you load horizontal and vertical alignment and template data, select a point to set out and then just touch a button—angles and distances are calculated automatically.

■ Resume function remembers where you left off

When you turn off the power, the SET6F remembers your preset points and other settings—for an entire week. To save time and effort, it even returns to your last operation mode when you switch it back on.

■ Convenient rechargeable battery

A powerful pocket-sized battery lets you perform up to 840 angle and distance measurements on a single charge. An optional backup battery provides five times that capacity.
