,1991 **Aerospace Robotics** Jerzy Sasiadek,2013-03-19 This book presents the most important and crucial problems of space automation in context of future exploration programs These programs could involve such issues as space situational awareness program planetary protection exploitation of minerals assembly manufacturing and search for new habitable location for next human generations The future exploration of Space and related activities will involve robots In particular new autonomous robots need to be developed with high degree of intelligence Such robots would make space exploration possible but also they would make space automation an important factor in variety of activities related to Space **Selected Topics in Robotics for Space Exploration** Raymond C. Bekey,2012-12-06 All life came from sea but all robots were born on land The vast majority of both industrial and mobile robots operate on land since the technology to allow them to operate in and under the ocean has only become available in recent years A number of complex issues due to the unstructured hazardous undersea environment makes it difficult to travel in the ocean while today's technologies allow humans to land on the moon and robots to travel to Mars Clearly the obstacles to allowing robots to operate in a saline aqueous and pressurized environment are formidable Mobile robots operating on land work under nearly constant atmospheric pressure their legs or wheels or tracks can operate on a firm footing their bearings are not subjected to moisture and corrosion they can use simple visual sensing and be observed by their creators working in simple environments In contrast consider the environment where undersea robots must operate The pressure they are subjected to can be enormous thus requiring extremely rugged designs The deep oceans range between 19 000 to 36 000 ft At a mere 33 foot depth the pressure will be twice the normal one atmosphere pressure of 29.4 psi The chemical environment of the sea is highly corrosive thus requiring the use of special materials Lubrication of moving

parts in water is also difficult and may require special sealed waterproof joints **AIAA Space Programs and Technologies Conference, March 24-27, 1992, Huntsville, AL.: 92-1701 - 92-1726** ,1992 **Department of Housing and Urban Development and certain independent agencies appropriations for fiscal year 1988** United States.
