Goodstein,1994-08-16 Powerful information technologies and the complex support systems they engender are evolving faster than people s ability to adjust to them In the workplace this leads to troublesome task performance added stress on users increased organizational inefficiency and in some cases a heightened risk of wide scale disaster In the marketplace it makes for consumer dissatisfaction Clearly traditional human computer interaction HCI and system design SD solutions to this dilemma have proven woefully inadequate What is needed is a fresh multidisciplinary approach offering a broader more dynamic framework for assessing needs and designing usable efficient systems Taking modeling concepts from engineering psychology cognitive
