Imbeau, 2011-01-11 Since intelligence can be influenced by circumstance and environment, The Parallel Curriculum Model Unit K-5 shows elementary educators how to provide clear unit planning utilizing the empirical based model. Broken out into 4 sections, this resource provides the following: 1 a chapter on each content unit in K-5 literacy, mathematics, social studies, and science using the Model; 2 a content framework based on national and content standards; 3 unit assessments; and 4 unit sequence as well as teacher reflection lessons. Approximately 5-7 lessons of each content area will be provided in every chapter in this handy resource. The opening chapter defines what The Parallel Curriculum is and discusses how this researched based curriculum can be created and utilized for gifted learners, learners with special needs, as well as general education students. Durzan,2012-12-06 For many the terms aging maturation and senescence are synonymous and used interchangeably but they should not be Whereas senescence represents an endogenously controlled degenerative programme leading to plant or organ death genetic aging encompasses a wide array of passive degenerative genetic processes driven primarily by exogenous factors Leopold 1975 Aging is therefore considered a consequence of genetic lesions that accumulate over time but by themselves do not necessarily cause death These lesions are probably made more severe by the increase in size and complexity in trees and their attendant physiology Thus while the withering of flower petals following pollination can be considered senescence the loss of viability of stored seeds more clearly represents aging Norden 1988 The very recent book Senescence and Aging in Plants does not discuss trees the most dominant group of plants on the earth Yet both angiospermic and gymnospermic trees also undergo the above phenomena but less is known about them Do woody plants senesce or do they just age What is phase change Is this synonymous with maturation While it is now becoming recognized that there is no programmed senescence in trees senescence of their parts even in gymnosperms e g needles of temperate conifers last an average of 35 years is common but aging is a readily acknowledged phenomenon In theory at least in the absence of any programmed senescence trees should live forever but in practice they do not Early Learning Thematic Lesson Plans, Grades PK - 1 Sherrill B.
