Our solar system includes planets with unique characteristics, mainly due to their locations in the solar system. Earth is unique because its location and characteristics allow life to exist. The relationship of the Earth, moon, and sun lead to seasons, tides, and the phases of the moon.

## Our Solar System:

We live in an ancient solar system that includes the sun, planets, dwarf planets, moons, dust, gas, and other objects like comets and asteroids. This solar system is one of many that are located in the Milky Way galaxy.

Early astronomers thought that Earth was the center of the universe and that all other heavenly bodies moved around it. Today, we know that the sun is the center of the solar system and that the planets move around it.

## The Planets:

Our solar system has eight planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. They revolve, or move in oval-shaped paths (called orbits), around the sun.

The order of the planets according to their position from the sun (closest to farthest) is:  
Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune.

Mnemonic device: **"My Very Educated Mother Just Served Us Noodles"**

The order of the planets according to their sizes (largest to smallest) is:

Jupiter, Saturn, Uranus, Neptune, Earth, Venus, Mars, Mercury.

Mnemonic device: **"Jason Sat Under Ninety-Eight Very Marvelous Monsters"**

Pluto used to be classified as the ninth planet from the sun. It's no longer included in the list of planets due to its small size and irregular orbit. Pluto is now considered a **dwarf planet**.

*Science Curriculum Topic Study* Page Keeley, Joyce Tugel, 2019-09-11 Today's science standards reflect a new vision of teaching and learning. How to make this vision happen. Scientific literacy for all students requires a deep understanding of the three dimensions of science education: disciplinary content, scientific and engineering practices, and crosscutting concepts. If you actively engage students in using and applying these three dimensions within curricular topics, they will develop a scientifically based and coherent view of the natural and designed world. The latest edition of this best seller, newly mapped to the Framework for K-12 Science Education and the Next Generation Science Standards (NGSS) and updated with new standards and research-based resources, will help science educators make the shifts needed to reflect current practices in curriculum, instruction, and assessment. The methodical study process described in this book will help readers intertwine content, practices, and crosscutting concepts. The book includes an increased emphasis on STEM, including topics in science, technology, and engineering. 103 separate curriculum topic study guides are arranged in six categories: Connections to content knowledge, curricular and instructional implications, concepts and specific ideas, research on student learning, K-12 articulation, and assessment. Teachers and those who support teachers will appreciate how *Curriculum Topic Study* helps them reliably analyze and interpret their standards and translate them into classroom practice, thus ensuring that students achieve a deeper understanding of the natural and designed world. **Resources in Education**, 2000-04 [Research in Education](#), 1972 **RTI & Differentiated Reading in the K-8 Classroom** William N.
