

Phylogenetic Trees

How do the changes in gene sequences allow us to reconstruct the evolutionary relationships between related species?

Why?

The saying "Don't judge a book by its cover," could be applied to the topic of evolution. For example, humans share 75% of their DNA with chickens. Biologists point to this as evidence that humans and chickens once shared a common ancestor. The advent of DNA technology has given scientists the tools with which to examine how closely related certain species are. DNA analysis allows scientists to construct phylogenetic trees whose branches link together the relatedness of different organisms.

Model 1 – Phylogenetic Trees

1. Refer to Model 1.
 - a. How long ago did the common ancestor of all the organisms on this phylogenetic tree exist?
35 mil.
 - b. Which two lines diverged 30 million years ago?
bear and panda
 - c. List all modern descendants of the organism that was alive at the point indicated by the asterisk.
every thing except
black and polar

Tree Thinking: An Introduction to Phylogenetic Biology David A. Baum, Stacey D. Smith, 2012-08-10 Baum and Smith both professors evolutionary biology and researchers in the field of systematics present this highly accessible introduction to phylogenetics and its importance in modern biology Ever since Darwin the evolutionary histories of organisms have been portrayed in the form of branching trees or phylogenies However the broad significance of the phylogenetic trees has come to be appreciated only quite recently Phylogenetics has myriad applications in biology from discovering the features present in ancestral organisms to finding the sources of invasive species and infectious diseases to identifying our closest living and extinct hominid relatives Taking a conceptual approach Tree Thinking introduces readers to the interpretation of phylogenetic trees how these trees can be reconstructed and how they can be used to answer biological questions Examples and vivid metaphors are incorporated throughout and each chapter concludes with a set of problems valuable for both students and teachers Tree Thinking is must have textbook for any student seeking a solid foundation in this fundamental area of evolutionary biology

Bickel, 2022-09-29 This book serves as a brief introduction to phylogenetic trees and molecular evolution for biologists and biology students It does so by presenting the main concepts in a variety of ways first visually then in a history next in a dice game and finally in simple equations The content is primarily designed to introduce upper level undergraduate and graduate students of biology to phylogenetic tree reconstruction and the underlying models of molecular evolution A unique feature also of interest to experienced researchers is the emphasis on simple ways to quantify the uncertainty in the results more fully than is possible with standard methods

Young, 2010 *Species Tree Inference* Laura Kubatko, L. Lacey Knowles, 2023-03-14 Inferring evolutionary relationships among a collection of organisms that is their relationship to each other on the tree of life remains a central focus of much of evolutionary biology as these relationships provide the background for key hypotheses For example support for different hypotheses about early animal evolution are contingent upon the phylogenetic relationships among the earliest animal lineages Within the last 20 years the field of phylogenetics has grown rapidly both in the quantity of data available for inference and in the number of methods available for phylogenetic estimation The authors first book Estimating Species Trees Practical and Theoretical Aspects published in 2010 gave an overview of the state of phylogenetic practice for analyzing data at the time but much has changed since then The goal of this book is to serve as an updated reference on current methods within the field The book is organized in three sections the first of which provides an overview of the analytical and methodological developments of species tree inference Section two focuses on empirical inference Section three explores various applications of species trees in evolutionary biology The combination of theoretical and empirical approaches is meant to provide readers with a level of knowledge of both the advances and limitations of species tree inference that can help researchers in applying the methods while also inspiring future advances among those researchers with an interest in methodological development **POGIL Activities for AP Biology** , 2012-10 **Models and Estimation for Phylogenetic Trees** Faisal Ababneh, 2006

Branching Out Amelie Sophia el Mahmoud, 2025

Creating phylogenetic trees to describe evolution is an ongoing project in biology. In 1987, two independent papers introduced a new technique used to construct phylogenetic trees called the method of phylogenetic invariants. Phylogenetic invariants are polynomials in the joint distributions arising from a Markov process on a tree. Since they were introduced, much work has been done to calculate phylogenetic invariants for certain classes of models. In this thesis, we introduce the algebraic geometric concepts underlying the computations of these invariants. We also provide a biological understanding of evolution, how it is represented through trees, and the assumptions we make to simplify our model. Finally, we describe the model used to calculate phylogenetic invariants and unpack the work done by Bernd Sturmfels and Seth Sullivant to explicitly calculate toric ideals of phylogenetic invariants for group-based models.

Maximum Likelihood Estimation of Phylogenetic Trees Bo Lin, 2001

This thesis is concerned with the statistical techniques used in molecular phylogenetics. We introduce some basic concepts in molecular biology, such as how the Markov model describes the evolutionary process, and use the likelihood method to re-construct the evolutionary tree with the DNA sequences. In this thesis, we did some simulation studies to show how the parameters setting and other factors affect the accuracy of re-construction results. In Chapter 4, we showed how the rate among sites affects the re-construct result, comparing it with only using a common rate across sites situation.
