Model 1 – Positive and Negative Feedback

1. What two types of feedback mechanisms are illustrated in Model 1?

negative and positive feedback

2. Identify at least 3 similarities in the two types of feedback mechanisms in Model 1.

signal sent, response, stimulus

3. Which of the feedback mechanisms in Model 1 would be most useful for amplifying (increasing) a condition that is advantageous (good) for the organism?

positive feedback

4. Which of the feedback mechanisms in Model 1 would be most useful for stopping a condition that is harmful or limiting a condition to specified levels?

negative feedback

READ THIS!

Feedback loops include the following three components: stimulus, signal, and a response. A stimulus is something that triggers or increases an event. The signal is a method of communicating information between two things. Finally, the response is the reaction to the stimulus.

Below are several descriptions of processes that occur in the human body. For each example, identify the stimulus and the response and state whether the process is positive or negative feedback.

5. When human tissue, such as skin or a blood vessel, is torn or cut, the cells near the damage send out a signal that activates platelets in the vicinity. As the platelets begin to form a plug, they release more chemical signals to attract more platelets and other clotting factors until the bleeding is stopped.

stimulus: The signal that activates platelets in the vicinity

response: The bleeding stops
positive feedback

Cell Metabolism Paula Bubulya, 2012

A global research community of scientists is teasing out the biochemical mechanisms that regulate normal cellular physiology in a variety of organisms Much of current research aims to understand the network of molecular reactions that regulate cellular homeostasis and to learn what allows cells to sense stress and activate appropriate biochemical responses Advanced molecular tools and state of the art imaging techniques discussed in this book continue to provide novel insights into how environmental changes impact organisms as well as to develop therapeutic interventions for correcting aberrant pathways in human disease

Peptides in Energy Balance and Obesity G. Uehbeck, 2009-01-01 Obesity is one of the relevant public health concerns and it is evident that body weight control is achieved through highly integrated physiological interactions like nutrient selection Presenting an account of the roles of specific peptides in energy balance this title provides an understanding of the pathophysiology of energy balance

Metabolic Pumps and Intracellular Homeostasis, Hormones and Cell Function, Intercellular Communication, Cell Motility and Contractility, Part B Edward Bittar, 1992-01-08 Volumes 5A and 5B of Fundamentals of Medical Cell Biology are a treatment of several key subjects including cellular signaling One profitable way to tackle both volumes is to read them with care but without endeavouring to master most of the details Then

should follow a more plodding study chapter by chapter Such a strategy is also urged in respect of the preceding volumes Although each chapter is only as detailed as space permits it should in the case of the student serve as an incentive to the study of the original papers

Functional Metabolism Kenneth B. Storey, 2005-02-25 Functional Metabolism of Cells is the first comprehensive survey of metabolism offering an in depth examination of metabolism and regulation of carbohydrates lipids and amino acids It provides a basic background on metabolic regulation and adaptation as well as the chemical logic of metabolism and covers the interrelationship of metabolism to life processes of the whole organism The book lays out a structured approach to the metabolic basis of disease including discussion of the normal pathways of metabolism altered pathways leading to disease and use of molecular genetics in diagnosis and treatment of disease It also takes a unique comparative approach in which human metabolism is a reference for metabolism in microorganisms and plant design and presents novel coverage of development and aging and human health and animal adaptation The final chapter reviews the past and future promise of new genetic approaches to treatment and bioinformatics This the most exhaustive treatment of metabolism currently available is a useful text for advanced undergraduates and graduates in biochemistry cell molecular biology and biomedicine as well as biochemistry instructors and investigators in related fields

Body Oxygen Homeostasis and Mitochondrial Function Avraham Mayevsky, Efrat Barbiro-Michaely, Michael Tolmasov, Mira M. Mandelbaum-Livnat, 2025-08-04 This book links oxygen metabolism from experimental animal models to human clinical applications bringing together concepts and knowledge from laboratory models to clinical practice In particular the book provides the experimental results of a rat model exposed to various protocols that prove the suggested monitoring approach describes the various monitoring devices developed for patients monitoring in clinical situations and provides a discussion of the results as well as conclusions The book is ideal for a range of basic scientists seeking greater understanding of the clinical applications and potential translation of in vitro and animal model studies as well as a range of clinicians seeking greater understanding of the fundamentals of oxygen metabolism and homeostasis
