Alessio Innocenti, 2012-03-07 The aim of this book is to provide an overview of the importance of stoichiometry in the biomedical field. It proposes a collection of selected research articles and reviews which provide up to date information related to stoichiometry at various levels. The first section deals with host guest chemistry focusing on selected calixarenes, cyclodextrins and crown ethers derivatives. In the second and third sections the book presents some issues concerning stoichiometry of metal complexes and lipids and polymers architecture. The fourth section aims to clarify the role of stoichiometry in the determination of protein interactions while in the fifth section some selected experimental techniques applied to specific systems are introduced. The last section of the book is an attempt at showing some interesting connections between biomedicine and the environment introducing the concept of biological stoichiometry. On this basis the present volume would definitely be an ideal source of scientific information to researchers and scientists involved in biomedicine, biochemistry and other areas involving stoichiometry evaluation. *Exploring the Effectiveness of POGIL and*

Chemorganisers in Foundation Chemistry Christine Elizabeth Mundy, 2015 The extended BSc programme at the University of Pretoria was the context of this study specifically students enrolled in foundation chemistry. This study was aimed at improving teaching and learning at this level by implementing pre-existing education interventions: Process Oriented Guided Inquiry Learning (POGIL) and the use of the Chemorganiser. Themes chosen for the interventions were the mole concept and stoichiometry and redox reactions as these have been identified as common areas of difficulty in Chemistry (Johnston 2010). POGIL required students to take on well-defined roles and work in groups on specially designed worksheets. Farrell Moog (1990) served as the theoretical lens for the study. The effectiveness of each intervention was explored using the classroom variables of productivity, student preference and opportunity to learn along with the output of student performance. Mixed methods including observations, focus group interviews, student questionnaires and student performance data were used. During the first year of implementation the Chemorganisers were well received by students. Increased classroom participation and confidence was noted along with stable levels of attendance. Students requested the inclusion of more challenging content. This intervention did not affect the time allocated for the tutorials and was easy to implement. Students performed better on average than their counterparts; a highly statistically significant difference was noted. p
