

The Cell Cycle

Illustrates the full cycle of a cell

What?

An ordered sequence of events that a growing cell undergoes to convert to two new cells. The cell must first copy its DNA to form two identical copies of each. The subsequent separation of cells from different chromosomes involves specific cells. For example, a cell that is undergoing a mitotic division will undergo the separation of chromosomes to form two identical daughter cells, but a cell undergoing a meiotic division will undergo the separation of chromosomes to form four daughter cells.
