

The Hardy-Weinberg Equations

What makes stable populations where the size doesn't change possible?

Why?

Genetic changes require genetic drift or genetic selection, processes that are affecting some of the genes in the population & therefore require changes in the genetic composition of the population or reproductive success within the population might have other factors. For that equilibrium to last, the Hardy-Weinberg equation has five conditions that describe genetic equilibrium: random mating, stable allele frequency, no mutation, no migration, and no selection.
