PERFORMANCE AUDIT

PUBLIC WORKS DEPARTMENT

2. Quality control measures in maintenance of roads by Public Works Department

2.1 Introduction

The public roads in Kerala are maintained by the Public Works Department (PWD), Local Bodies, Irrigation Department, Kerala State Electricity Board Limited, Forest and Wildlife Department, Railways, etc. PWD roads constitute 15 *per cent* of the total road network in the State and carry nearly 80 *per cent* of the total road traffic. The Roads wing and National Highways (NH) wing of the State PWD undertake the maintenance and quality control measures of the roads.

The Government of Kerala (GoK) introduced a three-tier quality monitoring system¹ under clauses 2401 and 2406 of the Kerala PWD Manual, revised edition 2012 (PWD Manual). Subsequently, for achieving the desired level of quality in public works as envisaged in the PWD Manual, GoK also set up² a Quality Control (QC) wing in the Department with effect from 01 October 2013 and established testing laboratories in all the districts. Quality Control test results in accordance with relevant codes/standards were made mandatory for passing work bills of all works costing more than ₹15 lakh. The Quality Control tests are to be carried out with reference to the Ministry of Road Transport and Highways (MoRTH) specifications (Appendix 2.1).

In order to enable the engineers and supervisory staff to check the different activities of construction with reference to the quality aspects and to ensure that the standards envisaged were achieved, GoK issued (July 2015³) an exclusive manual named the Kerala PWD Quality Control Manual (QC Manual) incorporating provisions for enhancing road safety. Every officer of the PWD entrusted with the execution of public works is expected to follow the guidelines strictly in the discharge of duties. Further, the PWD also issued⁴ PWD Quality Control Laboratory Manual (Laboratory Manual) in July 2015 for guiding the engineers and technical staff of the Quality Control Laboratories (QC Labs) and the field engineers on the procedures for conducting quality control tests.

It is the responsibility of the State PWD to maintain the traffic worthiness of the road networks throughout the year. The State has varying climatic conditions and

¹The first tier quality control tests are to be conducted by the contractor at his own cost, the second tier tests by the QC wing on random basis during execution of works and the third-tier tests to be done by technical experts after completion of the project.

investigation into building deterioration and defects in Malaysia's public schools. It sets forth an in-depth theoretical and empirical underpinning the maintenance management of public schools with the view to develop a building deterioration prediction model of building condition based on factors contributing to building defects for school buildings. The approach adopted is mixed method encompassing archived documentation, questionnaire survey and interview of sampled schools in Malaysia. It presents a number of useful tables, graphs and statistical analysis which are useful in understanding the factors contributing to building defects under reference. The prediction model assists the decision making of maintenance management to be more efficient with comprehensive budgeting as well as optimal maintenance and repair work. The book is of relevance to school managers, maintenance management practitioners and academics towards measuring and improving the building condition in schools. **Federal Register**, 2006-03 **Stormwater Management Manual** American Public Works Association, 2021-03-03. [Innovative Approaches to Agricultural Plant Disease Identification: Integrating Deep Learning into Traditional Methods](#) Yongliang Qiao, Chunlei Xia, Meili Wang, 2025-02-27. Identifying and managing plant diseases is a critical aspect of agriculture significantly impacting the economy and food security. The early detection and management of plant diseases are essential to maintain healthy crops, reduce plant damage and ensure high yields and quality of agricultural products. The traditional approach involves visually observing symptoms and abnormal growth patterns which is often limited by the subjectivity of human observation and labor costs. Nowadays traditional manual inspection of plant diseases is being replaced by advanced techniques such as sensing networks, machine vision, remote sensing and robotics. Researchers and engineers have developed numerous plant disease identification techniques and automatic disease inspection systems over the last few decades. **Case study of the Punjab Irrigation Department: consultancy report**, **Indian Trade Journal**, 2003-11-06 **Maintenance Management of Public Works and Public Utilities** United States.
