Abstract: The development of the holistic child is closely linked to the quality of the relationships experienced with others, as stated in the quality areas and principles in the QLAS Quality Practices Guide. By investigating the NCAC Quality Practice Guide, this study introduces the concept of the QLAS model more effectively. There are seven proportion quality areas in the QLAS which are staff relationships with children and peers; partnerships with families; programming and evaluation; children's experiences and learning; protective care and safety; health, nutrition and wellbeing and managing to support quality. As a conclusion, this QLAS instrument is able to serve as a guidelines to the childcare center on what is needed and required to be look into and take into consideration in order to ensure the quality of childcare centers.

Key words: Quality Improvements and Accreditation System (QLAS) model, accreditation system, childcare center, safety, health

INTRODUCTION

The family structure, career women and cost of living have dramatically changed for the past two decades. Such situations were seen in developed as well as developing countries throughout the world. Therefore as more mothers leave their homes to venture into the job market, there is a growing need to ensure they have a safe place to care for their children while they are working. Thus, child care is seen as a critical component of the work force. Today, early childcare centers mushroom throughout the country in the quest to fulfill the demand from working mothers. Therefore, there is a need to ensure these childcare centers are providing the best services that will enhance the holistic development of the child.

Despite the growing demand for childcare services and their critical role in development of children, childcare service providers have lagged far behind compared to most other service firms in applying marketing-oriented approaches to their businesses. Thus, the delivery and quality of this important consumer service has implications not only for direct customers of this service such as parents but also for users of the service (i.e., children) as well as the society as a whole.

The earliest years of a child's life is the key to predicting ultimate success in children's developmental outcomes (Love *et al.*, 2003; Sylva *et al.*, 2004). These early learning experiences are crucial determining factors for emotional and intellectual development and will

ultimately affect how well a child will perform later in life. Children who attend programs that meet high quality standards are more likely to provide lasting benefits. For instance, children who receive warm and sensitive care are more likely to trust people to enter school ready and eager to learn and to get along well with other children (Burchinal and Cryer, 2003).

Children deserve to get off to a good start in life. Their early experiences in the home, the neighborhood in child care and in early education programs such as pre-kindergarten and kindergarten all affect how successful they will be later in life. Research findings indicate that the better the quality of ECBC the child receives the higher the short and long-term positive influence on the child's development (Korjensvitch and Dunfom, 2010). Thus, there is a need to identify what constitutes high quality and what contributing factors support and sustain such high quality.

MATERIALS AND METHODS

Perspectives on child care quality: There are four perspectives on the quality of child care (Katz, 1993); the perspective of researchers and professionals in the field, the perspective of parents using child care, the perspective of child care staff and the perspective of the children in child care. Although, that all four perspectives must inform child care policy, the researchers and professionals perspective is considered far more often than are the other three.
