

Max/Min Word Problems

Example 2: (no equation given)

A farmer needs to fence off his animals. He bought 800 m of fencing and would like to maximize the total enclosed area. According to regulations the pens need to find these relative dimensions. What is the maximum area he can enclose, and what are its dimensions?

Again the word MAXIMUM means VERTEX...but...

we don't have an equation!

Hint: Start with the value you are trying to maximize/minimize

Anastassiou, Oktay Duman, 2016-03-21 This special volume is a collection of outstanding more applied articles presented in AMAT 2015 held in Ankara May 28 31 2015 at TOBB Economics and Technology University The collection is suitable for Applied and Computational Mathematics and Engineering practitioners also for related graduate students and researchers Furthermore it will be a useful resource for all science and engineering libraries This book includes 29 self contained and well edited chapters that can be among others useful for seminars in applied and computational mathematics as well as in engineering **Methods of Solving Nonstandard Problems** Ellina Grigorieva, 2015-09-17 This book written by an accomplished female mathematician is the second to explore nonstandard mathematical problems those that are not directly solved by standard mathematical methods but instead rely on insight and the synthesis of a variety of mathematical ideas It promotes mental activity as well as greater mathematical skills and is an ideal resource for successful preparation for the mathematics Olympiad Numerous strategies and techniques are presented that can be used to solve intriguing and challenging problems of the type often found in competitions The author uses a friendly non intimidating approach to emphasize connections between different fields of mathematics and often proposes several different ways to attack the same problem Topics covered include functions and their properties polynomials trigonometric and transcendental equations and inequalities optimization differential equations nonlinear systems and word problems Over 360 problems are included with hints answers and detailed solutions Methods of Solving Nonstandard Problems will interest high school and college students whether they are preparing for a math competition or looking to improve their mathematical skills as well as anyone who enjoys an intellectual challenge and has a special love for mathematics Teachers and college professors will be able to use it as an extra resource in the classroom to augment a conventional course of instruction in order to stimulate abstract thinking and inspire original thought **Logical Number Theory I** Craig Smorynski, 2012-12-06 Number theory as studied by the logician is the subject matter of the book This first

volume can stand on its own as a somewhat unorthodox introduction to mathematical logic for undergraduates dealing with the usual introductory material recursion theory first order logic completeness incompleteness and undecidability In addition its second chapter contains the most complete logical discussion of Diophantine Decision Problems available anywhere taking the reader right up to the frontiers of research yet remaining accessible to the undergraduate The first and third chapters also offer greater depth and breadth in logico arithmetical matters than can be found in existing logic texts Each chapter contains numerous exercises historical and other comments aimed at developing the student s perspective on the subject and a partially annotated bibliography

CONDUIT: A New Multidisciplinary Integration Environment for Flight Control Development, 1997 A state of the art computational facility for aircraft flight control design evaluation and integration called CONDUIT Control Designer s Unified Interface has been developed This paper describes the CONDUIT tool and case study applications to complex rotary and fixed wing fly by wire flight control problems Control system analysis and design optimization methods are presented including definition of design specifications and system models within CONDUIT and the multi objective function optimization CONSOL OPTCAD used to tune the selected design parameters Design examples are based on flight test programs for which extensive data are available for validation CONDUIT is used to analyze baseline control laws against pertinent military handling qualities and control system specifications In both case studies CONDUIT successfully exploits trade offs between forward loop and feedback dynamics to significantly improve the expected handling qualities and minimize the required actuator authority The CONDUIT system provides a new environment for integrated control system analysis and design and has potential for significantly reducing the time and cost of control system flight test optimization

Inequality for Mapping Tori of Free Group Automorphisms Martin R. Bridson, Daniel Groves, 2010-01-15 The authors prove that if F is a finitely generated free group and ϕ is an automorphism of F then $F \rtimes_{\phi} \mathbb{Z}$ satisfies a quadratic isoperimetric inequality The authors proof of this theorem rests on a direct study of the geometry of van Kampen diagrams over the natural presentations of free by cyclic groups The main focus of this study is on the dynamics of the time flow of t corridors where t is the generator of the \mathbb{Z} factor in $F \rtimes_{\phi} \mathbb{Z}$ and a t corridor is a chain of 2 cells extending across a van Kampen diagram with adjacent 2 cells abutting along an edge labelled t The authors prove that the length of t corridors in any least area diagram is bounded by a constant times the perimeter of the diagram where the constant depends only on ϕ The authors proof that such a constant exists involves a detailed analysis of the ways in which the length of a word w in F can grow and shrink as one replaces w by a sequence of words w_m where w_m is obtained from $\phi(w_{m-1})$ by various cancellation processes In order to make this analysis feasible the authors develop a refinement of the improved relative train track technology due to Bestvina Feighn and Handel
