

Quadratic Inequalities

Quadratic inequalities are similar to quadratic equations and when plotted they display a parabola. Solving a quadratic inequality gives a range of solutions.

 **Example** Solve $x^2 + 6x + 5 < 0$

Factorising gives $(x + 1)(x + 5) < 0$, so the graph crosses the x axis at -1 and -5 . We want the x values when the graph is less than 0 , i.e. where the curve is below the x axis.

The solution to this inequality is written as $-5 < x < -1$.

If instead we had $x^2 + 6x + 5 > 0$:

We want the x values when the graph is **greater than** 0 ,
i.e. where the curve is **above** the x axis.

The solution is written as two inequalities $x > -1$ and $x < -5$.

John Hornsby,John Hornsby,Margaret L. Lial,1999 This book intended for a college algebra and trigonometry course is the culmination of many years of teaching experience with the graphing calculator In it the authors treat the standard topics of college algebra and trigonometry by solving analytically confirming graphically and motivating through applications Throughout the first five chapters the authors present the various classes of functions studied in a standard college algebra and trigonometry text Chapter One introduces functions and relations using the linear function as the basis for the presentation In this chapter the authors introduce the following approach which is used throughout the next four chapters after introducing a class of functions the nature of its graph is examined then the analytic solution of equations based on that function is discussed Students are then shown how to provide graphical support for solutions using a graphing calculator Having established these two methods of solving equations the authors move on to the analytic methods of solving the associated inequalities Students then learn how the analytic solutions of these inequalities can also be supported graphically under consideration the authors use analytic and graphical methods to solve interesting applications involving that function By consistently using this approach with all the different classes of functions students become aware that the authors are always following the same general procedure and just applying that procedure to a new kind of function Throughout the text the authors emphasize the power of technology but provide numerous warnings on its limitations the authors stress that it is only through the understanding of mathematical concepts that students can fully appreciate the power of graphing calculators and use technology appropriately
