### 1.0 Introduction

We would like to introduce you to Delta's unique ability to control your photo gear, wirelessly.

Delta makes a *two-way* link between your camera, flash, and you. Let's say you're using the Delta system for wireless flash sync. The remote Delta unit will send back confirmation that it received the trigger signal!

Delta provides wireless sync and/or wireless shutter control. And, Delta provides wireless TTL control of remote Qflash's.

Delta controls four independent *Zones* for wireless flash or motor drive. You can activate any one Zone, or any combination of Zones 1,2,3 and 4. There are 15 possible Zone combinations, plus one that shuts off all Zones. Switch your lighting instantly, remotely. Shoot cameras, or combinations of them, from your remote position.

Delta also has eight unique *System* codes. Delta units set to one System cannot activate Deltas set to different Systems. You control the System-code to make Delta units work together or independently, as required.

Each Delta can be selected to send, receive, or relay commands to your equipment.. For example, four Deltas can become two remote send/receive Systems, or they can become one System with one sender and three receivers. If you need extremely long-range wireless control, Deltas can *relay* commands to further Delta units. You need only one type of Delta and fewer of them than with conventional wireless triggers.

Delta is very small and light and mounts easily to cameras, brackets, poles, and tripod legs. Adapter cords are available for all popular cameras and flashes. A Universal Module (Uni-Mod), though not required, allows you to hot sync Delta directly from camera hot shoes.

There are many more useful features of Delta and we encourage you to read on!

**Magnetic Materials** Yi Liu, D.J. Sellmyer, Daisuke Shindo, 2008-11-23 In December 2002 the world's first commercial magnetic levitation super train went into operation in Shanghai. The train is held just above the rails by magnetic levitation (maglev) and can travel at a speed of 400 km/hr completing the 30 km journey from the city to the airport in minutes. Now consumers are enjoying 50 GB hard drives compared to 0.5 GB hard drives ten years ago. Achievements in magnetic materials research have made dreams of a few decades ago reality. The objective of the four volume reference Handbook of Advanced Magnetic Materials is to provide a comprehensive review of recent progress in magnetic materials research. Each chapter will have an introduction to give a clear definition of basic and important concepts of the topic. The details of the topic are then elucidated theoretically and experimentally. New ideas for further advancement are then discussed. Sufficient references are also included for those who wish to read the original work. In the last decade one of the most significant thrust areas of materials research has been nanostructured magnetic materials. There are several critical sizes that control the behavior of a magnetic material and size effects become especially critical when dimensions approach a few nanometers where quantum phenomena appear. The first volume of the book Nanostructured Advanced Magnetic Materials has therefore been devoted to the recent development of nanostructured magnetic materials emphasizing size effects. Our understanding of magnetism has advanced with the establishment of the theory of atomic magnetic moments and itinerant magnetism. Simulation is a powerful tool for exploration and explanation of properties of various magnetic materials. Simulation also provides insight for further development of new materials. Naturally before any simulation can be started a model must be constructed. This requires that the material be well characterized. Therefore the second volume Characterization and Simulation provides a comprehensive review of both experimental methods and simulation techniques for the characterization of magnetic materials. After an introduction each section gives a detailed description of the method and the following sections provide examples and results of the method. Finally further development of the method will be discussed. The success of each type of magnetic material depends on its properties and cost which are directly related to its fabrication process. Processing of a material can be critical for development of artificial materials such as multilayer films, clusters, etc. Moreover, cost-effective processing usually determines whether a material can be commercialized. In recent years processing of materials has continuously evolved from improvement of traditional methods to more sophisticated and novel methods. The objective of the third volume Processing of Advanced Magnetic Materials is to provide a comprehensive review of recent developments in processing of advanced magnetic materials. Each chapter will have an introduction and a section to provide a detailed description of the processing method. The following sections give detailed descriptions of the processing properties and applications of the relevant materials. Finally the potential and limitation of the processing method will be discussed. The properties of a magnetic material can be characterized by intrinsic properties such as anisotropy, saturation magnetization, and extrinsic properties such as coercivity. The properties of a magnetic material can be affected by its chemical composition.

and processing route With the continuous search for new materials and invention of new processing routes magnetic properties of materials cover a wide spectrum of soft magnetic materials hard magnetic materials recording materials sensor materials and others The objective of the fourth volume Properties and Applications of Advanced Magnetic Materials is to provide a comprehensive review of recent development of various magnetic materials and their applications Each chapter will have an introduction of the materials and the principles of their applications The following sections give a detailed description of the processing properties and applications Finally the potential and limitation of the materials will be discussed
