The engines are fitted with a heat exchanger for freshwater. This exchanger is located in the engine block. The coolant (freshwater) is pumped through the exchanger and the engine block. The coolant (freshwater) is pumped through the exchanger and the engine block.

The engines are lubricated by means of a pressure lubrication system, where an oil pump supplies oil to all the lubricating points in the correct quantities at all engine speeds. The pressure in the TAMD60 engines is

controlled by a relief valve which is located in the engine block.

The cover part of the pressure lubrication is an oil cooler.

The fuel system is well protected from interruptions during running by means of an electrically operated fuel pump. On the TAMD60 engines the fuel injection pump is large mounted under the other engine from the pump fitted on a bracket.
