## Pneumatic System

## Compressed Air Connections

Compressed air is used to perform the shifting, clutch disengagement and countershaft brake engagement. The compressed air is controlled by solenoid valves. A dedicated air tank mounted to the frame is needed to supply the air for the transmission. Air is supplied to the

transmission via a supply line to the left side of control housing. The tank is pressurized by the engine mounted air compressor and contains a check valve, to prevent air pressure loss if a leak is present in the main air system.

Compressed air connector between the control housing and the clutch control valve.

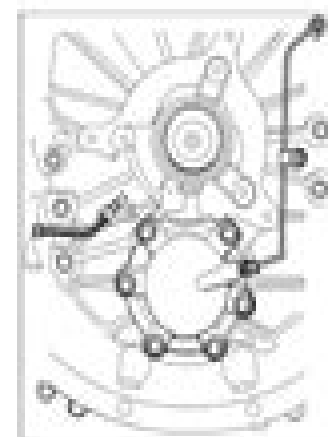

Figure 19

Air connector between control housing and countershaft brake (pilot line). Air connector from the clutch control valve to the clutch cylinder (pilot line).
