

## Identifying leaks

Puddles on the garage floor or drive, or obvious wetness under the bonnet or underneath the car, suggest a leak that needs investigating. It can sometimes be difficult to decide where the leak is coming from, especially if the engine bay is very dirty already. Leaking oil or fluid can also be blown rearwards by the passage of air under the car, giving a false impression of where the problem lies.

**Warning:** Most automotive oils and fluids are poisonous. Wash them off skin, and change out of contaminated clothing, without delay.

**LEARNER  
HINT**

The smell of a fluid leaking from the car may provide a clue to what's leaking. Some fluids are distinctively coloured. It may help to clean the car carefully and to park it over some clean paper overnight as an aid to locating the source of the leak. Remember that some leaks may only occur while the engine is running.

## Sump oil

Engine oil may leak from the drain plug....

## Oil from filter

...or from the base of the oil filter.

## Gearbox oil

Gearbox oil can leak from the seals at the inboard ends of the driveshafts.

## Antifreeze

Leaking antifreeze often leaves a crystalline deposit like this.

## Brake fluid

A leak occurring at a wheel is almost certainly brake fluid.

## Power steering fluid

Power steering fluid may leak from the pipe connectors on the steering rack.

## Towing

When all else fails, you may find yourself having to get a tow home – or of course you may be helping somebody else. Long-distance recovery should only be done by a garage or breakdown service. For shorter distances, DIY towing using another car is easy enough, but observe the following points:

- ☐ Use a proper tow-rope – they are not expensive. The vehicle being towed must display an ON TOW sign in its rear window.
- ☐ Always turn the ignition key to the 'on' position when the vehicle is being towed, so

that the steering lock is released, and that the direction indicator and brake lights will work.

- ☐ Both front and rear towing eyes are provided. They are located centrally, below the front and rear bumpers.

☐ Before being towed, release the handbrake and select neutral on the transmission. On models with automatic transmission, special precautions apply. If in doubt, do not tow, or transmission damage may result.

- ☐ Note that greater-than-usual pedal pressure will be required to operate the brakes, since the vacuum servo unit is only

operational with the engine running.

- ☐ On models with power steering, greater-than-usual steering effort will also be required.
- ☐ The driver of the car being towed must keep the tow-rope taut to avoid snatching.
- ☐ Make sure that both drivers know the route before setting off.
- ☐ Only drive at moderate speeds and keep the distance towed to a minimum. Drive smoothly and allow plenty of time for slowing down at junctions.
