

POGIL: Intermolecular Forces

Model 1: What Is an Intermolecular Force?

As you have learned, matter is made up of discrete particles called atoms which chemically combine to form molecules. Molecules do not exist as independent units; in fact, groups of molecules "stick together" in order to form liquids and solids. The forces that hold groups of molecules together are intermolecular forces. Without intermolecular forces, the world as we know it would not be the same.
