

## The Cell Cycle

Illustrates the full cycle of a cell

### What?

An ordered sequence of events that a growing cell undergoes to convert to two new cells. The cell must first copy its DNA and divide in two. For multicellular organisms, differentiation of cells from different developmental pathways creates cells. For example, a cell that is specialized to move quickly through mitosis to form a new cell, but a cell that is specialized to move through a long period of growth before dividing. The cell cycle is a continuous process that is regulated by a variety of factors.

### Model 1 - The Cell Cycle

1. Most cells spend most of the cycle in G1, the growth phase.
2. During S, the cell copies its DNA.
3. During G2, the cell grows and prepares for division.
4. During M, the cell divides into two daughter cells.
