Oxidation and Reduction Brian J. Knapp, 1998 Theories and concepts of oxidation and reduction reactions are explained through the use of a series of illustrated step by step demonstrations

Principles of Redox Reactions Malika Ammam, 2018-03-05 As a teacher of physical chemistry I noticed that students even in advanced classes have difficulties in understanding the basics of redox chemistry In this Section 3 I attempted to discuss some fundamental principles related to redox processes by focusing on the species that might lose or gain electrons determination of the oxidation numbers or states of atoms in compounds and ways of balancing redox reactions To further clarify the discussed concepts numerous questions and problems with detailed answers are provided Most of these questions are formulated by students like you I believe that this Section 3 would greatly help students with levels varying from high school to advanced university classes

Sustainable and Functional Redox Chemistry Shinsuke Inagi, 2022-04-29 Mimicking nature's efficiency and sustainability in organic chemistry is a major goal for future chemists redox reactions are a key element in a variety of fields ranging from synthesis and catalysis to materials chemistry and analytical applications Sustainability is increasingly becoming a consideration in synthesis and functional chemistry and an essential element for the next generation of chemistry in academia and industry This book represents a compilation of the latest advancements in functional redox chemistry and demonstrates its importance in achieving a more sustainable future This book is an ideal companion for any postgraduate students or researchers interested in sustainability in academia and industry

Redox J. Schüring, H.D. Schulz, W.R. Fischer, Jürgen Böttcher, W.H.M. Duijnsveld, 2000-01-24 Few processes are as important for environmental geochemistry as the interplay between the oxidation and reduction of dissolved and solid species The knowledge of the redox conditions is most important to predict the geochemical behaviour of a great number of components the mobilities of which are directly or indirectly controlled by redox processes The understanding of the chemical mechanisms responsible for the establishment of measurable potentials is the major key for the evaluation and sensitive interpretation of data This book is suitable for

advanced undergraduates as well as for all scientists dealing with the measurement and interpretation of redox conditions in the natural environment

Redox Mohammed Awad Ali Khalid, 2017-09-06 Redox reactions are central to the major element cycling many cell cycles many chemisorption and physisorption processes trace element mobility from rocks and sediments toward wells aquifers trace element toxicity toward life forms and most remediation schemes including water treatments over the last three decades the field has attracted a lot of scientists and a great deal of researches has been done in redox chemistry This book provides a very broad overview of the state of the art of understanding redox processes which starts with giving a concise introduction that describes the origin historical background and the development of the redox definitions The book is organized into two sections that include ten chapters and introduces in Section 1 generalized electron balance theory and its applications in electrolytic redox systems redox active molecules and its applications in device memory fundamentals and applications of flow batteries and their integration into antidirect current and donor acceptor titrations of displacement and electronic transference Section 2 introduces redox in biological processes including roles of reactive oxygen species in respiration metabolism and regulations and redox in physiological processes as redox sensitive TRP channels TRPA1 and TRPM2 All chapters are written by different authors with the exception of Chapter 1 Introduction This clearly reflects the broad range of topics that have been covered by experts in the field

Exploring the Effectiveness of POGIL and Chemorganisers in Foundation Chemistry Christine Elizabeth Mundy, 2015 The extended BSc programme at the University of Pretoria was the context of this study specifically students enrolled in foundation chemistry This study was aimed at improving teaching and learning at this level by implementing pre existing education interventions Process Oriented Guided Inquiry Learning POGIL and the use of the Chemorganiser Themes chosen for the interventions were the mole concept and stoichiometry and redox reactions as these have been identified as common areas of difficulty in Chemistry Johnston 2010 POGIL required students to take on well defined roles and work in groups on specially designed worksheets Farrell Moog 1990 served as the theoretical lens for the study The effectiveness of each intervention was explored using the classroom variables of productivity student preference and opportunity to learn along with the output of student performance Mixed methods including observations focus group interviews student questionnaires and student performance data were used During the first year of implementation the Chemorganisers were well received by students Increased classroom participation and confidence was noted along with stable levels of attendance Students requested the inclusion of more challenging content This intervention did not affect the time allocated for the tutorials and was easy to implement Students performed better on average than their counterparts a highly statistically significant difference was noted p

Non-redox Reactions Catalyzed by Biomimetic Flavin-based Organocatalysts and the Discovery of Selective Oxidation Methods for the Preparation of N-Heterocycles Pawan Thapa, 2019 In nature flavoproteins FMN and FAD are known to catalyze several chemical transformations which play a vital role in the growth development and survival of organisms They are involved in one electron and two electron transfer reactions photo induced electron transfer reactions dehydrogenase reactions oxidative atom transfer reactions and also rare non redox reactions Their enhanced stability and ability to turn over in presence of dioxygen has inspired synthetic chemists including our group to perform biomimetic transformations within a range of function of natural flavoproteins In chapter 1 both intramolecular and intermolecular dehydrogenative coupling between the alpha carbon of tertiary amines and various nitrogen phosphorus and carbon based nucleophiles are reported This study signifies the flavin dependent oxidase type chemistry promoted by synthetic flavins rendering the catalytic construction of some sophisticated heterocycles through an atom economical and aerobic approach Mechanistic studies with different radical probes suggest the involvement of radical intermediates in the reaction cycle Moreover intramolecular kinetic isotope studies performed reveal possibility of Hydrogen atom abstraction being rate determining step In chapter 2 a non redox type of chemistry is disclosed A subclass of riboflavin mimics was found to catalyze C C bond formation by activating small molecules in a new manner This approach was successfully applied to synthesize various industrially important dyes and chemical reagents Additionally the relationship discovered between molecular structure and catalytic function of riboflavin mimics in these new chemical reactions revealed a plausible explanation for the function of natural riboflavin dependent hydroxynitrilase enzymes in biological system Mechanistic studies using nuclear magnetic resonance NMR spectroscopy UV vis spectroscopy and electron paramagnetic resonance EPR spectroscopy showed a possible frustrated lewis pair FLP type of interaction between aldehydes and flavin mimics In chapter 3 studies on benzimidazole synthesis by iron catalysts will be discussed 1 2 disubstituted benzimidazoles serve as important class of molecules in several area of chemistry including drug discovery catalysis etc Our investigation in this area with redox active iron catalysts revealed N N disubstituted ortho phenylenediamine substrates being superior to N N disubstituted ortho phenylenediamines in generating 1 2 disubstituted benzimidazoles Extensive UV vis spectroscopy studies and kinetic studies have been performed in addition to EPR spectroscopy to understand the nature of mechanism Both Lewis acid property and redox active property of iron trichloride are thought to play a significant role in catalysis Smooth complex formation between N N disubstituted ortho phenylenediamine substrates and iron catalyst provides the driving force for the electron transfer process to form productive iminium intermediate A simple method for chemo selective oxidation of isoindolines to isoindolinones was also studied in chapter 4 This method utilizes no catalyst no additive mild condition and is highlighted as

just solvent mediated transformation Mechanistic investigation shows hydrogen atom abstraction process leading to isoindole intermediates which further binds to oxygen to give desired isoindolinones products *Photochemical Redox Reactions of Dyes and Other Molecules in Rigid Solvents* Joseph Rennert,1953 **Reaction-kinetic Studies of Inorganic Redox Reactions in Solution** S.
