Personal Recollections. IV** G. Semenza, E.C. Slater, R. Jaenicke, 1995-01-31 The editors invited selected authors who had participated in or observed developments in biochemistry and molecular biology particularly in the second half of this century to record their personal recollections of the times and circumstances in which they worked Having been given free reign both content and style of the contributions reflect the flavour of the personality of the author The book reflects the explosive development of biochemistry and molecular biology and related sciences that had led to the almost unique situation of these fields coming of age at a time when their founding fathers or their scientific children were alive and well The contributions in this volume encompass a wide variety of experiences in many different countries and in very different fields of biochemistry

*Comprehensive Biochemistry* Marcel Florkin, Elmer Henry Stotz, 1962 **Nuclear Volume and Cellular Metabolism** R. Hildebrand, 2013-11-11 The application of morphometric techniques in biology and the development of biochemical methods for cytological histological research have deepened substantially our knowledge and understanding of the structure dynamics and function of morphological structures thereby improving upon a purely descriptive presentation Thus the limits between the individual disciplines in basic research have become blurred With the development of suitable methods of measuring the size of nuclear volumes it has become possible to obtain data regarding the variable state and nucleokinetic processes in the genetic center of control of the cell Siebert 1967 and to evaluate these data statistically so as to make them verifiable With the formulation of the basic law of karyometry by Palkovits and Fischer 1968 in a dynamic approach to

genetic and functional trends in karyometry i e an attempt to relate nuclear volume changes exclusively to the size and number of chromosomes and on the other hand to comprehend these changes as an expression of functional changes successfully connected with one another and interpreted bio logically The early function oriented observation that a swelling of the nuclear volume is an expression of an increase in cellular function while a decrease in the volume is an indication of a lowering of activity provided a preliminary basis for estimating nu clear size as a statement about the functional state of a tissue or organ
