

Installation

Assembly of the filter system (Illustration 1)

Assemble the filter system at the location where the pump finally will be. The filter pump consists of the following parts:

1. 90° connection bracket
2. Transparent cover
3. Clamping ring
4. Filter tank
5. Screw connection Ø 32/38 mm
6. Bracket for filter pump
7. Filter pump
8. Connection hose Ø 32 mm

Assembly of the filter system (Illustration 2,3,4)

1. Open the clamping ring and remove the transparent cover from the filter tank.
2. Fill the filter tank with the filter balls which are included with the order (approx. 320g).
3. Now place the seal onto the underside of the transparent cover.
4. Lay the transparent cover once again onto the upper side of the filter tank. It is very important to ensure that all surfaces have been cleaned once again and are free from any dirt before you do this.
5. The transparent cover is connected to the filter tank using the clamping ring. The clamping ring is screwed together with the clamping ring screw and clamping ring screw nut.
6. Fit the connection bracket on the upper side of the transparent cover.
7. Finally, connect the connection bracket with the filter pump. Fasten all connections with hose clips and ensure that the pump connecting pieces are adequately sealed using teflon tape.

Pump hose connections (Illustration 5)

A: Return line - connection between the filter tank and the connection to the inlet nozzle (pool). The filtered water is fed back into the pool at this point.

B: Skimmers – connection between the skimmer connection (pool) and the filter pump. The water that is going to be cleaned is drawn in from the pool at this point.

Filter system installation instructions

- Once the filter system has been properly assembled, the sand chamber filled with sand and the hoses connected as described above, you may begin with filtration.
- Do not plug the system in until advised to do so below.
- Make certain the pump is not plugged in to a power supply.
- Before operating the filter system, it is important to ensure that the filter system is positioned outside the pool and is lower than the pool's water level. The hose connections must also be correctly connected and fastened.
- If you haven't done so already, fill your pool with water. Ensure that the water level is at least 2,5 – 5 cm above the top of the hose intake (Skimmer) and return ports in the pool.
- The filter system is now vented. If applicable, open the vent screw on the upper side of the transparent filter cover until the water flows out.
- Release the shut off valve at the intake port (Skimmer) in the pool. If you plugged the intake port (Skimmer), remove the plug to allow the water to flow into the intake hose.
- With the filter-pump system installed in a location level lower than your pool's water level – water will automatically flow into the pump-filter system.
- Allow the filter tank to fill with water.
- Check the filter system and the connection hoses for leaks and resolve, if necessary. Leakage points may possibly arise due to manufacturing tolerances, which need to be resolved by wrapping teflon tape around the connections before the connection hose is attached.
- Your filter system is now ready for use.
